FOR THE FARM AND KITCHEN.

Care of Colts.

The *Horseshoe* suggests the following sensible hints: "Colts should not be permitted to stand on a plank, cement, paved, or any hard floor the first year, as these are liable to seriously affect the feet and legs. Unless the yard where the colts run has a fine, dry, gravelly soil, it should be well littered, so as to keep their feet dry. Mud or soft, wettish ground is apt to make tender hoofs, no matter how well bred the colt may be. One reason why the horses in one district grow up superior to those in another in hoof, bone, muscle and action is because it has a dry limestone and silicious soil. When the mare is at work do not let the colt run with her; and if she comes back from her work heated allow her to get cool before suckling the colt, as her overheated milk is liable to give the foal diarrhœa."

Food for Sheep.

If a meal of concentrated food, such as cornmeal and oilcake, be given sheep once a day, the straw and other coarse material will answer well for them in place of good hay, provided it is cut fine, salted, and placed where they can eat all they wish. It may not be relished by some to be reminded of the fact that there is a saving in cutting straw, and even cornstalks, for sheep, but the saving in the waste of a large flock compensates for the work, although but little work is usually done at this season. The object in cutting is to induce them to eat like really of it, as it can be easier prepared when fine, leaving the better quality of hay for the horses and cattle. Sheep, while not rejecting any kind of food at times, are still capable of selecting that which is good, and a well-prepared mess of finely cut stuff, salted to taste, will be acceptable at all times. If preferred, the meal may be sprinkled with cornmeal or ground or exchange to sliced roots twice a week is still better. Well managed sheep give greater profits at all times.

"On Their Shoes."

In breeding for form it is a practice which chicken fanciers, who are probably the best breeders in the world, to put extremes together to produce a happy medium. For instance, to get a perfect length of back in the chicken, it was necessary to couple a short-backed cock with long, rangy hen. This rule could be followed with profit in breeding cattle, so far as form was concerned, but when we come to the milking quality, like the tortoise quality in the horse, the question of form seems absolutely to have nothing to do with it. We say this advisedly, too, notwithstanding the numerous prescriptions for a perfect cow's form that are going the round of the papers. This can be proved thus: Let one man select all the cows of a certain form in a dairy, and another pick out the same number from those that do not, with a view solely to the amount of milk they give, and a thousand to one the last lot are the best cows. In selecting breeders for milk we cannot choose the two extremes, but we can feed to put pedigree with pedigree and hope for the best. This rule does not apply so well with the naughty, for it has been tried for form for a long, long series of years.—*Live Stock Journal.*

Shelter the Pigs.

Experiments made by Professor F. M. Shelton of the Kansas Agricultural College, show that it pays to protect pigs. Ten lots of ten each, alike as possible, were kept during the last two winters in separate pens, five in the basement of a barn and five in the yard, without covering, save straw for beds. They were fed with Indian corn, twice a day, each mess being carefully weighed. The result was as follows: Pigs in the barn, one pound of pork cost 4.9-10 pounds of corn; pigs outside, one pound of pork cost 9.7-10 pounds of corn. Or, expressed in other words, each bushel of corn fed in the barn made 11.3-10 pounds of pork, fed outside made 6.7-10 pounds of pork. This shows that of every bushel of corn fed to the unsheltered pigs an amount capable of making 4.6 pounds of pork was used in keeping the pigs warm. According to these figures, if the sheltered pigs gained ten pounds in weight during the season, it was by the expenditure of 49 pounds of corn for each pound of pork, or 490 pounds of corn for for the whole increase. The unsheltered pig required 670 pounds of corn for 100 pounds of pork. This shows a saving of 80 pounds of corn, about 1 1-2 bushels, in favor of each sheltered pig; but if the pigs are as healthy in one case as in the other, and the gain is only in the saving of corn, it will hardly amount to the interest on the cost of the shelter and the wear and tear.—*Scientific American.*

Teams on the Farm.

As a general thing a span of horses will plough over more ground in a day than a yoke of oxen, because they walk faster, yet occasional exceptions to this occur. We remember to have tried in turning over a fallow of 20 acres, in which a span and a yoke of oxen were employed. It was decided to test their relative capacity for the work, both teams being allowed their natural gait. Equal sections of land were allowed to both teams and the oxen came out invariably a little ahead, gaining time at each turning of the corners. They were then tried on the same lands for a day, with no marked advantages on either side. These oxen were broken to the work, held their heads well up and marched along with a steady, stately step. In this particular instance the oxen were better for ploughing than the horses, for the simple reason that, performing equal work, they cost less for keeping and were more readily prepared for labor. Where the field operation is at a considerable distance from the barn or pasture the horse would have the advantage in the celerity of his movements in reaching it. As a general thing, the summer season through, horses can do more work than oxen, for this reason, if no other, they can stand the heat better. Both are important on a considerable farm, and if the ox is found to be worth the most when age suspends labor, the horse will have made up the difference by the celerity of his movements and the more diversified use for which his labor has been made available. Both are good in their places, and no extensive farmer is properly equipped for business who is destitute of either.

Recipes.

Sauce Sance.—Half a coupful of butter, cut stir in a tablespoonful of flour and one pint of boiling water, nearly one coupful of sugar, two spoonfuls good vinegar, spice to taste.

American Potato Salad.—Peel half a dozen cold boiled potatoes and slice them, not too thin; boil two eggs hard, wash and chop rather fine one head of celery, peel one onion and chop it fine; break the yolks of the hard-boiled eggs smooth with the yolk of one raw egg; stir with them a gill of oil, two tablespoonfuls of vinegar, a level teaspoonful each of salt and dry mustard and a salt-spoonful of pepper, mix this dressing with the potato, celery and onion and serve the salad.

Veal Kidney Pie.—Mince a couple of veal kidneys very finely with the fat, season them with finely chopped herbs, cloves, pounded mace and nutmeg, and with salt and pepper to taste, a little chopped celery or celery seeds may also be added. Take four or five hard-boiled yolks of eggs, some fine bread crumbs and a very little wine, mix all well together. Cover the bottom of a pie dish with puff paste, put in the ingredients, and cover with puff paste. Bake in a moderate oven half an hour.

Cream Half Mince.—Trim the outer leaves from a head of firm, white cabbage. Slash the cabbage about in a large pan of boiling salted water, and then shower by rainy thumbs over the top a tablespoonful each of butter and flour, and stir them until they bubble, then gradually stir in half a coupful of cream and three tablespoonfuls of vinegar; put the shaved cabbage into the sauce, season it with salt and white pepper and stir it over the fire until it is adding 5 minutes. Take the saucepan from the fire, stir with the adding the yolks of a raw egg, and then serve it at once.

THE FAMILY PHYSICIAN.

Everybody is sick and coming without permanent cure and ruling totally in life in long days, is sometimes very [illegible] for applying a positive [illegible] remedy, tested and proven on the poor over night.

Dr. Martinez Granville, of London says that the man who thinks he has caught cold should take a large pinch of pungent snuff, use the tapes of the [illegible], and wrap his coat around him, while he has a big fit of sneezing. This, he says, is nature's remedy for a chill.

Milk porridge can be varied so that an invalid will not tire of it soon. Put a dozen raisins in about two cups of milk, boil for five minutes; they will flavor it agreeably, though they are not intended to be eaten. A little nutmeg can be added, or the white of an egg beaten light may be stirred in just after the milk is taken from the stove.

Prof. Knapp, of New York recommends the wearing of cotton pellets moistened with glycerine and water, deep in the ear canal when there is a defect in the natural cerumen. They protect the deeper and inner parts of the ear against unfavorable atmospheric influences, prevent drying of the mucous membranes, arrest profuse discharge, and improve hearing. They must be renewed once a day or week, as the case requires, and may be worn a lifetime with benefit and comfort.

The latest agent introduced for the relief of neuralgia is a 1 per cent solution of hyperosmic acid, administered by subcutaneous injection. It has been employed in Billroth's clinic in a few cases. One of the patients had been a martyr to sciatica for years, and had tried innumerable remedies, including the application of electricity no fewer than 200 times; while for a whole year he had adopted vegetarianism. Billroth injected the above remedy between the tuber ischii and trochanter; within a day or two the pain was greatly relieved, and eventually quite disappeared. It would be rash to conclude too much from these results, in the face of the intractability of neuralgia to medication, but if it really prove to be as efficacious as considered, hyperosmic acid will be a therapeutic agent of no mean value.

THE HOME OF REPTILES.

A Trip Through the Everglades of Florida.—What Was Seen.

The New Orleans *Times-Democrat* prints a detailed account of its Florida Everglades expedition. The report was written by Maj. A. H. Williams, commander of the expedition. The exploring party consisted of twelve persons, six white and six colored, and carried six Racine canoes. They went by steamer from Cedar Keys to Puntarassa, Fla., where they took to the canoes, and proceeded up the Calossahatchie river to Lake Okeechobee, a distance of about ninety miles. Skirting the western and southern shores of Lake Okeechobee they discovered eight large streams flowing into a dense saw-grass swamp that borders the everglades. On entering one of the streams, which was named "T. D.," the expedition proceeded to its head, and began the tedious work of cutting its way through the swamp to the saw-grass. The denseness of this swamp can be imagined from the fact that the party traveled on an average of only a quarter of a mile a day. Myriads of huge alligators, snakes, leeches, and poisonous bugs were encountered. Leeches were especially troublesome, covering the legs of the men. Emerging from the swamp the party entered the saw-grass, which grows from ten to twelve feet high, very dense, with sharp edges that cut one way and saw the other. This grass the party took, and pushed forward over the stubble. After traveling due south some ten miles the party struck innumerable small, deep lakes of ponds filled with alligators and the finest fish. About thirty miles from Lake Okeechobee the party entered the grassy waters of the everglades and encamped on an island, the first dry land encountered after leaving the lake. The only trees on the island were the custard apple and wild fig. The progress of the expedition thenceforth was more rapid. It passed through thousands of small islands, some slightly submerged and all covered with large trees of luxuriant foliage. No Indians were encountered. The head of Shark river was reached on the 5th of December, the expedition sailing down. It debouched into Whitewater bay, on the gulf coast, about thirty miles from Cape Sable. The distance traveled from Lake Okeechobee to the gulf is about 150 miles. The whole distance in canoes was nearly three hundred miles. The expedition established the fact that the everglades, from Lake Okeechobee to Cape Sable, were worthless for any purpose of cultivation; that they contain no large tracts of land above water; that they cannot be successfully drained; and that the establishment of an industrious or a telegraph line along the route traversed would be impossible. The everglades, and especially the northern glades, are a vast swamp, irreclaimable and useless for any purpose. The only cultivable portions of the southern peninsula lie on the Atlantic and gulf coasts, with this vast morass between them.

Costly Woods from Afar.

Perhaps the finest and most costly records to this country, so fine and costly indeed that it is rarely used solid, but for veneering, is what is called French walnut, which does not, however come from France, being grown only in Persia and Asia Minor. As the tree is crooked and dwarfed, large pieces can rarely be obtained from it, and it is chiefly valuable for the "burls," or tough excrescences which grow upon the trunk. These, when properly shed, are of singular and striking beauty, the grain being twisted into outlines, though symmetrically introvert figures. Next to this so-called French walnut, ebony is probably the most valuable of the cabinet woods. Ebony, also is difficult to get in pieces of size, a fact which quite as much as its deep dark hue causes it to be prized. Rosewood and mahogany are also dense woods, and are just now particularly fashionable and in demand. The best mahogany is that of San Domingo, though nearly as good wood comes from Cuba, Honduras, Mexico and Africa. These woods are to be had at fair prices, as there is a considerable quantity in the market. Fair rosewood is selling in the market for from five to seven cents a pound, in the log. Of the domestic woods, bird's eye maple is very handsome for cabinets, and is very popular. The red variety of beech is a beautiful wood, and can be made to imitate cherry. Oak, ash and whitewood can be worked up very handsomely by simply using a good filler and bringing out the natural beauty of the wood by hand polishing. Black walnut of the best quality also presents a beautiful appearance when subjected to the same treatment.—*United States Stationer.*

The Wife's Welcome.

A well known clergyman in the north of England entertained recently a brother clergyman from some distance. The evening being unpropitious, he asked him to remain for the night. At dusk the clergyman asked his guest to step into the manse while he gave orders to have his conveyance ready in the morning. As the visitor entered the manse the clergyman's wife mistook him in the dusk for her husband, and, seizing the pulpit Bible which was on the lobby table, brought the full weight of it across his shoulders, exclaiming emphatically, "Take that for asking the ugly wretch to stay all night."

TOPICS OF THE DAY.

The train that makes the run of 912 miles between New York and Chicago in 25 1-2 hours makes only seven stops; but there are so many bridges to cross and villages to pass through that the speed is necessarily relaxed as often as once every ten miles, else the average for the entire run might be much higher than 35.29 miles an hour. Its greatest speed is on the run between New York and Philadelphia; and here the slowest mile is made in two minutes, and the fastest in fifty-seven seconds. Many a mile is made in sixty seconds.

The time-honored joke concerning the London tonsorial artist whose sign proclaimed him "barber to the queen" has been ruined by an act of parliament, which punishes any person who, without the authority of her majesty or any of the royal family, or of any government department, assumes or uses in connection with any trade, business, calling, or profession the royal arms, or any so nearly resembling the same, in such a manner as to be calculated to lead other persons to believe that he is carrying on his trade business, calling, or profession by or under such authority."

Silk culture is assuming great importance in California. It is said by those who have tried it that some parts of that State are peculiarly well adapted for this industry. At a recent meeting of the State Board of Silk Culture steps were taken to import the best varieties of mulberry trees from Italy for grafting, and it was stated that a large lot of silkworm eggs were about to arrive from Japan. It was decided to continue the school of instruction for silk culture, if sufficient money for the purpose be forthcoming. The water is abundant in the adapted for silk reeling than that of any other country on account of a peculiar softness which charact[illegible] it, and its freedom from all alkaline substances.

During a visit to the great needle manufactory at Kremnitz, Germany, last year, the Emperor William, on examining a hundred superfine needles expressed his astonishment that eyes could be drilled in such minute objects. Thereupon the foreman, asking for a hair from the Emperor's beard, instantly bored an eye in it, threaded it and handed it to the astonished monarch. Queen Victoria possesses a needle in which some relative's life are deposited so minutely that a microscope is required to distinguish them. Both of these curiosities will be displayed at the International Exhibition of Needlework, at Sydenham, in July.

Official statistics recently published in France show that about one-half of the population of that country live by agriculture, a fourth by different descriptions of industry, a tenth by commerce, nearly another tenth by the liberal professions, and a fraction over 41 per cent lives on the interest of money invested in Government and other securities. Upward of nine millions of the first-class own and cultivate their land; three millions and a half of proprietors of lots too small to furnish a living work occasionally as laborers on the land of others; five millions are farmers and metayers, and there are half a million of farm servants, wood cutters, charcoal burners, &c. The more important industries—mines, quarries, and manufactures—give employment to over a million of persons, while six millions derive a livelihood from the exercise of the manual arts. Bankers, commission agents, and merchants number nearly seven; shopkeepers nearly 200,000, and proprietors of hotels, cafes, and lodging houses something over a million. Religion, including religious communities, absorbs a quarter of a million of the population. There are 130,000 doctors, &c., 111,000 teachers, 121,000 artists, and 23,000 men of letters. About 2,000,000 live on their income, and the number of pensioners is close on 3,000,000.

Women Lawyers in Italy.

Italy is getting as much ahead of us as America. La Signora Lydia Poet has just been admitted to practice at the bar in Turin, and appeared for the first time in her barrister's gown to plead the cause of a young painter whose pictures had been unjustly detained by his landlord, and much injured by the damp of the garret to which they had been consigned. The lady barrister obtained a great success for her humorous description of the subject of the pictures, and, amid much applause, obtained a verdict with goodly damages in favor of her client. She was escorted home, still enveloped in her lawyer's robes, by a large concourse of people, who gave her a serenade in the evening, in which the tenor voice of the young painter was conspicuous for its deep expression.

A Grasping Woman.

"I don't like a philosophical woman, I don't like a woman who is always reaching out after the infinite." "Ah!" returned his companion, "if my wife wouldn't reach out after anything but the infinite I might be happy." And the unfortunate man rubbed the bald place on his head while his countenance fell beneath the weight of his memories.

A Military Man Made Happy.

WASHINGTON, D. C.—General G. C. Knublin, in a letter stating his wife was cured of a painful ailment by St. Jacobs Oil, writes that after witnessing its marvelous effect in her case, he would cheerfully pay $100 for a bottle of St. Jacobs Oil, if he could not get it cheaper.

"Yes," said Mr. Stagg's, "I intended to visit Texas, but, being near sighted, I made a mistake in the man. Did I apologize? Didn't get a chance. He licked me before I could say two words."

The cold is so intense in several of the Western cities that the safe manufacturers are obliged to use chilled iron in their business.

In a Davenport, Ia., billiard saloon, the other day, on the table nearest the stove a couple of balls were observed to freeze.

Some editors in the south complain greatly at being forced to work with cold chisels.

A dessicator has been found at Chillicothe, consisting of a piece of cold check.

TO CONSUMPTIVES.

"Wolfe's Medical Discovery" is a concentrated potent extractive, or blood cleansing principle, that makes positive cures from all wasting or pulmonary diseases, from the common cough, to the formidable scrofulous swellings or ulcers. Internal tumors, abscesses and ulcerations yield to its beneficent influence. Consumption, which is but a complication of all the diseases named, is cured by a few use of this God-given remedy. See article on consumption and at the bottom of Part III of the World's Dispensary Dime Series of pamphlets, sent free, post-paid. Address Wolfe's Dispensary Medical Association, Buffalo, N. Y.

"Hello, you there!" said one South, "in your long-winded ad. do tell us some details worth reading."

A LADY WANTS TO KNOW

the local Paris correspondent of the Chicago Tribune, the most popular [illegible] which only the conquerors of the world, or at educated [illegible] Dr. Pierce's "Pellets" are called direct [illegible] "Pellets." It will cost you a dime, [illegible] Dr. Pierce's Common Sense Medical Adviser, 1000 pages, paper covers, sent for 10 cents.

The Vanderbilts are now said to have got into Florida politics. He has been in Vanderbilt politics a long time.

WHAT'S SAVED IN GAINED.

Week-makers will remember by employing Dr. Pierce's Medicines. His "Pleasant Purgative Pellets" and "Golden Medical Discovery" cleanse the blood and system from poisonous humors and other serious diseases, including all scrofulous and other humors, scaly skin, eruptions.

In Arch Lee, there was such a coldness between the Northern and Southern sections of the country that those in debt let their lives.

Decline of Man.

Weakness, Dyspepsia, Lost Vigor, Sexual Debility, Cured by Wolfe's Aromatic Schnapps.

Dr. R. A. Dayo, 20 Cedar St., Brooklyn, says: "Parsons's Purgatives really shine in cases for constipation and Bright's kidney disease. Dr. Parsons's Purgatives to do cures in [illegible] Hochelaga Consumptive cured [illegible]."

Mother Swan's Worm Syrup.

Infallible, to relieve and speedily remove for wormishness in children or consumption, &c.

His Son's Advice.

I have been troubled for over twelve years with a weakness of the kidneys and bladder, which the doctors call incurable. I could not at times stand up, and would have to continually get around bed by day and night with incessant pains in my back and sides. The urine deposited in my water could not rest well on the bottom of my pocket. I was at that time employed by the Maine Central Railroad, and had to give up work for a time. Being told it would cost me at least a month's time to cure the disease, I called in my son in Lewiston, who is in the drug business, and after consulting with him he advised me to use Hunt's Remedy, as he knew of so many successful cures that it had made in Lewiston and vicinity. I at once commenced to get and began to improve. I had to stop in my work and take my water up and carefully watch its color and notice the sediment, and I soon found that my cure was all going and the weakness of the kidneys and bladder was conquered. I have no trouble with them now, and am able to do my business, and for over five years I have enjoyed good health, and despite to Hunt's Remedy for it, and I consider it a duty and pleasure to recommend so good a medicine as Hunt's Remedy, and I have taken pains to recommend it to others in this vicinity.

You are at liberty to publish this acknowledgment, hoping it may be the means of relieving suffering humanity.

E. B. Crane, Furniture Dealer,
Formerly with Maine Central Railroad.
Newport, Me., May 17, 1883.

Remarkable Escape.

John Kuhn, of Lafayette, Ind., had a very rare escape from death. This is his own story: "One year ago I was in the last stages of consumption. Our best physicians gave me no encouragement. I finally got so low that my sister and I could not live twenty four hours. My friends then purchased a bottle of Dr. Wm. Hall's Balsam for the Lungs, which benefited me. I took a second bottle and three more bottles. I am now in perfect health, having not a cough nor symptom.

THE GREAT GERMAN REMEDY FOR PAIN.

Relieves and cures RHEUMATISM, Neuralgia, Sciatica, Lumbago, BACKACHE, HEADACHE, TOOTHACHE, SORE THROAT, QUINSY, SWELLINGS, SPRAINS, Soreness, Cuts, Bruises, FROSTBITES, BURNS, SCALDS, And all other bodily aches and pains.

FIFTY CENTS A BOTTLE.

Sold by all Druggists and Dealers. Directions in 11 languages.

The Charles A. Vogeler Co. Baltimore, Md., U. S. A.

They who seek early and late the most round used, occasionally, therefore, fail to obtain imported by a wholesome tonic like Hostetter's Stomach Bitters. To all, the purity and efficacy as a remedy and preventive of fever and ague, is conceded. It checks the current of consumption and natural symptoms, relieves constipation, dyspepsia and biliousness, attests positive evidence of the physical energy it imparts and gives the convalescent a good appetite. For sale by all Druggists and dealers generally.

A DANGEROUS AMBUSCADE.

Discovered Barely in Time—The Most Deceptive and Lurking of Modern Evils Group Falls Described.

Something of a sensation was caused in this city yesterday by a rumor that one of our best known citizens was about to publish a statement concerning some unusual experiences during his residence in Syracuse. How the rumor originated it is impossible to say, but a reporter immediately sought Doctor S. G. Martin, the gentleman in question, and secured the following interview:

"What about this rumor, Doctor, that you are going to make a public statement of some important matters?"

"Just about the same as you will find in all rumors—some truth; some fiction. I had contemplated making a publication of some remarkable episodes that have occurred in my life, but have not yet decided it as yet."

"What is the nature of it, may I inquire?"

"Why, the fact that I am a human being instead of a spirit. I have passed through one of the most wonderful orders that perhaps ever occurred to any man. The first intimation I had of it was several years ago, when I began to feel chilly at night and feverish after retiring. Occasionally this would be varied by a severe set of the muscles and cramps in my arms and legs. I thought, as most people would think, that it was only a cold and so paid as little attention to it as possible. Shortly after this I noticed a peculiar catarrhal trouble and my throat also became inflamed. As if this were not variety enough I felt sharp pains in my chest, and a constant tendency to headache."

"Why didn't you take the matter in hand and check it right where it was?"

"Why doesn't everybody do so? Simply because they think it is only some trifling and passing disorder. These troubles did not come all at once and I thought it unmanly to heed them. I have found, though, that every physical neglect must be paid for and with large interest. Minute and drawn drafts on their constitution with or honoring them come. These minor symptoms I have described, grew until they were giants of a year. I became more nervous, had a strange fluttering of the heart, an inability to draw a long breath and an occasional moodiness that was terribly suggestive of paralysis. How I could have been blind to such a danger I know not what this meant I can not imagine."

"And did you see a change?"

"Yes, I decided, in the prime of life I went to Kansas and Colorado, and while in Denver, I was attacked with a mysterious hemorrhage of the urinary organs and lost twenty pounds of flesh in three weeks. One day of severe pain I was taken with a terrible chill and became advised to a very severe attack of pneumonia. My left lung became partially filled with water, and my leg and ankle became twice their natural size. I was confined to my bed for several weeks in the midst of the severest agony, with my arms over my head, and in constant fear of suffocation.

"And did you make no attempt to save yourself?"

"Yes, I did, from the efforts, I tried everything that seemed to offer the least prospect of relief. I had taken quantities of medicine and had them make an analysis of my condition. Here I first learned of Syracuse and several friends urged me to try it. I said I must die."

"It seemed as though there was a section was true for my last breath, and my mouth parched. I was in a fixed, glassy state, my body was covered with a cold, clammy cloth sweat, and I recollect one in the anxious faces of my family and friends. 'This is the finish.'

"I came at last. My wife, at my request, had begun to read from a pamphlet upon her own responsibility, and while I grew better very slowly, I gained steadily and [illegible] I have no trace of the terrible [illegible] from which I was delivered [illegible] I was. The story sounds [illegible] true, and my life [illegible] I am a convert to Warner's Safe Cure, which I was unknown to and would do the same with, I believe, are of [illegible] the medicine. Does not such an experience justify me in making a public statement?"

"It certainly does. But then Mr. Life's discovery of a remedy equal to the occasion."

"Not a remedy. On the contrary, it is one of the most [illegible]. The trouble is, few people know they have it. It has so few marked symptoms until it is too late to prevent a fatal ending. Thousands every year getting up in years and in vigor and not suspected it. It is quite natural I should feel [illegible] this remedy while my wife [illegible] that I have. She knows of [illegible] and with surprising results in many cases for their own peculiar ailments, or which it has similar power.

The strongest testimony of the above [illegible] is simply endorsed by every many of our most prominent citizens, among them being Judge Beach and Colonel James S. Goodrich, of the Times, while the real Jewett, H. Bruce and Rev. Professor W. F. Goddington, D. D., give their merely their learned endorsement. In the age of wonders surprising things are quite common, but an experience so unusual as that of Dr. Martin's and occurring here in our midst, may well excite some attention and teach a lesson. It shows the necessity of guarding the kidneys, most of all diseases, disorder and by the means which have been proven the most reliable and efficient. It shows the depth to which we can sink and yet be rescued, and it proves that we need not suffer if the truths are observed.—*Syracuse Journal.*

Pulitzer's.

Sold everywhere, or sent by mail for 25 cents in stamps. Also Sheridan's Cure for Chicken Cholera, Roup, etc. Sold everywhere, or sent by mail for dealers' use, price $1.00, by mail, $1.25. Circulars sent FREE. I. S. JOHNSON & CO., Boston, Mass.

MAKE HENS LAY

A Dangerous Case.

ROCHESTER, June 1, 1882. "Two years ago I was attacked with the most intense and deadly pains in my back and kidneys.—Kidney."

"Extending to the end of my toes and to my brain!

"Which made me delirious!

"From agony.

"It took three men to hold me on my bed at times.

"The doctors tried in vain to relieve me. But to no purpose.

"Morphine and other opiates

"Had no effect!

"After two months I was given up to die!

"When my wife

"Heard a neighbor tell what Hop Bitters had done for her, she at once got and gave me some. The first dose eased my brain and seemed to go hunting through my system for the pain.

"The second dose eased me so much that I slept two hours, something I had not done for two months. Before I had used five bottles I was well and at work, as hard as any man could, for over three weeks; but I worked too hard for my strength, and taking a hard cold, I was taken with the most acute and painful rheumatism all through my system that was ever known. I called the doctors again, and for several weeks they left me a cripple on crutches for life, as they said. I met a friend and told him my case, and he said Hop Bitters had cured him and would cure me. I probed at him, but he was so earnest I was induced to use them again. In less than four weeks I threw away my crutches and went to work lightly and kept on using the Bitters for five weeks, until I became as well as any man living, and have been so for six years since. It also cured my wife, who had been so for years; and has kept her and my children well and hearty with from two to three bottles per year. There is no need to be sick at all if these Bitters are used.—T. J. Bass, ex-Supervisor.

"That poor invalid wife!

"Sister!

"Mother!

"Or daughter!

"Can be made the picture of health!

"With a few bottles of Hop Bitters!

"Will you let them suffer?
