

**NOT AT NO. 1!** It's the U. S. Navy's Grumman F4F-3, "Wildcat," a midwing single seat fighter powered by a radial engine. The edges of both the wings and tailplane of the "Wildcat" are tapered to square cut tips. The fuselage is short and cylindrical.

**FIRE AT NO. 2!** It's Germany's Heinkel He.111K, a long range, low wing, heavy bomber powered by twin engines. The wings are swept back elliptically on the leading edges and the trailing edges are straight. It has an oval tailplane and a large single fin and rudder.

### Army, Navy Officially Adopt Popular Names For Aircraft Types

Acting to lessen some of the confusion among the civilian population regarding the names of military aircraft, and to aid the general public more easily to identify the planes mentioned in press dispatches from the battle fronts, the Army and Navy have officially recognized the popular names which have become associated with the various models.

This practice has long been common in England, with the names "Spitfire" and "Hurricane" becoming almost household words both there and in this country. The British have also adopted certain names for American-built aircraft and, with few exceptions these names have been retained on this side of the water.

Since many of these planes have earned fame, it was felt that this practice should be maintained rather than attempt to plant new and perhaps conflicting terms in the minds of the civilian population. Certain minor changes have been made by the Army and Navy in accepting the popular names. Thus, the Curtiss P-40 series, models which have been known as the "Tomahawk," "Kittyhawk," and "Warhawk," will be known now only as the "Warhawk."

One important exception to the rule of adopting the British names is the Navy's carrier fighter, the Grumman "Wildcat." In the Fleet Air Arm of the Royal Navy, this plane is called the "Marlet." Against the Japanese the "Wildcat" has made the reputation of being the best carrier-based fighter in the world. To help the American public follow this plane's exploits in action with the Fleet Air Arm, the Royal Navy has been requested to consider adopting the American name of "Wildcat."

In carrying out this plane-naming plan, the manufacturers' suggested names were given first consideration and, unless there was good reason, these suggestions were approved.

#### Boner-Boy Dilbert Display Opens at Local Art Gallery

Dilbert, the boner-boy of the Navy's flight bases, will show visitors to the Person Hall Art Gallery how not to fly, in an exhibit of special interest to cadets opening tomorrow. Some 75 Dilbert cartoons, created by Lieut. Robert Osborn to illustrate graphically the common mistakes of piloting, will be on display.

Art gallery visiting hours are from 1200 to 1700 on Sundays, and from 1000 to 1700 on weekdays.

"Dr. Renault's Secret" is good for your Health! Here's why:

It'll give your spine a work-out.  
It'll stimulate scalp circulation by raising your hair.  
Aid your digestive process—your heart will jump into your throat.  
If you have a weak pulse—it'll speed it up—plenty!  
It'll exercise your eyes. They'll pop in and out.  
It'll pep you up. Make you tingle all over—as the goose-flesh recedes from your skin.
