# Task Force Bares Opportunities

Standing: Mrs. Pinckney, Dr. Miller. Seated: Miss Maxine Grady.

## 13 Colleges

# Trip Enthusiastic

Three stops: Washington, D.C., Williamsburg, Va.; and Norfolk State College! No wonder 84 young ladies and four chaperons excitedly assembled behind the Little Theatre on two buses to begin their tour at 2:00 a.m. last April. The trip was being sponsored and paid for by the 13 Colleges Curriculum Program.

Arlington National Cemetery was the first place toured by the enthusiastic group. Here they roamed around and took pictures of: the Marine Corps War Memorial, the Kenney graves, and the Tomb of the Unknown Soldier.

Afterwards, they headed for the Hospitality House Motor Inn, glad for chance to relax. But

lunch and a rest period quickly revived them, and they were ready to continue. This time the Smithsonian Institute and surrounding areas being their destination. In small groups they viewed Constitutional Avenue; toured the Air and Space Building, the Museum of Natural History, the Museum of History and Technology, the National Gallery of Art; or climbed the Washington Monument, and afterwards, the Museum of African Arts.

The next day, breakfast, check-out, load, and departure for Williamsburg, Va! After arriving, there was lunch at Williamsburg's Information Center, a background movie, and a guided tour. Some of the students later remarked that it was like a dream becoming a reality to see a city so "old" and so "pure."

After their stop over at Williamsburg the group had one more stop, Norfolk State College. Here the young ladies were greeted by some of the male students on the 13CCP there and the Omega Psi Phi fraternity. Later a special planetarium show was given to highlight the evening.

During the visit on our campus by members of the Plans for Progress Task Force, I was able to sit in on one of the sessions. I found it both informative and interesting. What follows are hints on the future and points of interest that the two representatives imparted to the group about their respective jobs and their relation to the Task Force.

The Task Force, which is centralized in Washington, D.C., has been aided and advised by former Vice-President Hubert H. Humphrey. Following his suggestion of offering the public "living proof" of what one can do or become actual representatives were engaged in the project "Plans for Progress." One of the purposes of this project is to give the "I did, so can you", general concept to the public, especially members of minority groups. To point out the deep "commitment" that major companies love in this program, Mrs. Jacqueline Pickney, Manager of Employee Publications for General Electric (Valley Forge Space Center) explained that while employed representatives are away from their jobs they and their replacements must be paid by the companies.

Mrs. Pinckney, employed at the Missile and Space Center, Valley Forge, Pennsylvania, explained to a group of science majors several of the recent projects undertaken by G.E. These include a weather satellite which orbits the earth 600 miles above with a speed of 1,000 m.p.h. or more; a communication satellite and a Bio satellite containing a monkey that will orbit the earth for 30 days, be recovered and studies made on the biological effects of extended space stay. G.E. has prefabricated houses that were first used by the Army and are now to be used for low cost housing by HUB. G.E. needs all kind of workers, especially engineers and technical writers. Mrs. Pinckney, in giving examples of some salaries, noted that secretaries right out of high school earn about \$90 per week; that engineers right out of college may earn \$800 a month. Other salaries range accordingly.

Mrs. Pinckney's companion was Maxine Grady, ticketing agent for American Airlines. Miss

Students prepare projects for science emphasis week.

# Search For Unknown Keys Science Week Acts

The "Search for the Unknown" was, and still is, a quest for anyone willing to do so. This was indeed the challenge as the "Science Emphasis Week" passed our way.

The "Science Emphasis Week" was sponsored by the Science Seminar Club and the Beta Kappa Chi honorary scientific society. April 28-May 2. The purpose of the week-long program was quite evident. Since the importance of a great realm of science was emphasized. It also was made explicit the vast amount of unknown information that confronts the scientist today. This is why there is a tremendous need

for researchers in all areas of science.

The week started with a "bang" as the students presented very interesting and informative research reports. The highlights of the week were the presence of visiting lecturers, who came from Harvard University, in Boston, Mass., and the University of Florida at Gainesville. There also were lecturing professors from the University of North Carolina at Greensboro and Greensboro College.

It was quite evident that all of the science majors as well as the non-science majors enjoyed the "Science Emphasis Week."

Grady is at present stationed in Memphis, Tenn. She also talked about her job and corporation. In a job like her, a two-year training program is needed and, of course to work with the airlines, one must be willing to locate anywhere, wherever needed. For a job like hers, a college graduate can easily enter, regardless of major; versatility, a willingness to learn and a like for people is what counts. Miss Grady, in response to a question raised about a stewardess, explained the physical requirements.

The two ladies expressed concern that each person choose a job with benefits other than just a high salary.

## 'Spring Feet'

One beautiful spring day three young ladies went strolling across campus in bright colored frocks with open-toed shoes. Three handsome young men approached them and said, "Hi." The girls, thinking it would be to their advantage to play hard to get continued walking without a word.

As they flaunted by with their heads aloof one of the young men replied, "We didn't want to talk to you anyway cause your toes look like you been chopping wood with 'em."

Moral? It is your feet that literally carries you to success.

Realizing this, we have decided to give a few points on Foot care. The daily care of your feet should include bathing for cleanliness; creaming for lubrication, hot and cold baths or alcohol for stimulation; powder for protection.

The weekly care of your feet should include a complete pedicure that follows this procedure:

1. File the nails straight across
2. Soak feet in warm soapy water
3. Push cuticles back
4. Apply cuticle remover
5. Loosen and remove dead cuticle
6. Clean under toe nail
7. Trim hangnails
8. Apply cuticle oil
9. Remove oil from nails
10. Polish if desired

The benefits that you will gain from taking care of yourself are more than just physical. They are mental and emotional as well. Besides, what woman can look beautiful and relaxed when her feet are hurting?

# To Readers

Students have started a project to raise funds for the U.N. C.F. Your support is needed in selecting a popular entertainer. Please take just one minute to clip and fill out the form below and drop it in the box provided in the foyer of the Student Union.

## BLACK BLINDNESS

And when you stop and look at me  
And you don't see you,  
And you cringe and say  
"You ain't wit it Baby,"  
And when I stop and look at you  
And I don't see me  
And I sigh and say,  
"Dat won't git it Baby,"  
Did we really look or...  
Just didn't see?

-- Betty Jones
