

-Safety for

Realizing that self-preservation is responsible for our interest in the prevention of personal injuries, there is something else that should incite each of us to guard against every type of accident that could possibly occur. Namely, *those loved ones who we leave at home, and who are entirely dependent on us for their livelihood.*

The assurance of returning home each day free of injuries and knowing we have earned a full day's wages is well worth our best efforts in remaining "accident free."

THE ODDS ARE AGAINST US

For the person who looks forward to *living twenty years longer*, and most of us have high hopes of even surpassing that mark, *the odds against us when taking unnecessary chances are entirely too great.*

To be very frank, *the odds are over ten million to one against us when we attempt to save one minute, and take chances that might easily result in the loss of life.*

We must admit that a great many of us in this day and time are prone to gamble occasionally, but none of us would accept a bet with one chance in ten million of being a winner.

You ask why the odds are over ten million to one? . . . The answer is *that in 20 years there are 10,512,000 minutes, and many a life has been snuffed out in much less than one minute.*

If we must gamble, why not place our bets on a sure thing? . . . *Practice safety at all times and assure ourselves of less suffering, higher wages, and a much longer life.*

IT HAS HAPPENED HERE . . .

It is hard to believe that employees will disregard safe practice rules and regulations that are entirely for their protection, and yet right here in our plant, this has occurred on numerous occasions. With personal safety

goggles furnished to all employees doing work that might endanger their vision, there is no satisfactory alibi for the type injury depicted in this cartoon. It is the responsibility of every individual to use their protective equipment whenever it is needed.
