

You and Yours

SIGNS THAT SAVE US!

It is very gratifying to know that a great majority of our employees DO believe in signs, even though they are not superstitious. In fact, it is to our advantage that we do obey all signs which call our attention to any unsafe practice or hazardous condition.

It is a known fact that numerous fires are caused by some thoughtless person smoking in a NO SMOKING area, and that too many personal injuries result from safety signs being disregarded.

In industry today, management is doing everything possible to keep us posted on hazardous conditions, as well as any unsafe practice that could possibly cause personal injury. Surely the least we could do is to READ and HEED the caution signs that are for our protection.

Throughout our State today, it is alarming to note the number of motor vehicle operators who disregard the STOP signs at road intersections and railroad crossings, and the fatalities that result daily from this very unsafe practice.

We must remember that time and money are involved in an effort to keep us posted about hazardous conditions, and that regardless of the location of a caution sign on the highway or in our plant, it has been put there to help us remain "accident-free."

PAY ATTENTION TO SIGNS!

DIAMOND-SHAPED YELLOW SIGNS LIKE THESE MEAN THAT THERE IS SOMETHING AHEAD FOR WHICH WE SHOULD SLOW DOWN. SOME HAVE WORDS OR MARKS TO SHOW WHY WE MUST DRIVE SLOWLY.
