

EYE

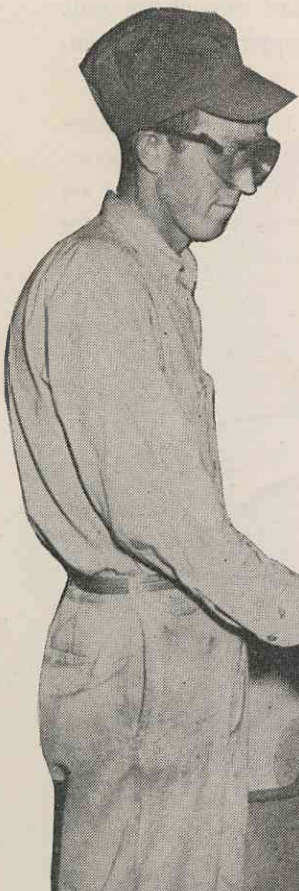

APPEAL'

Since *good vision* is always an asset in earning a livelihood, the Safety Department has continually stressed the great importance of using safety goggles in any type of work that could possibly injure the eyes. Personal safety goggles are furnished each employee of the Maintenance Department, as well as all other employees who have occasion to do *chipping, grinding, wire cutting*, use an *air hammer*, or *handle any caustic or acid*.

Keeping foremost in mind at all times that "a glass eye may *look* okay, but that one cannot *see* with it," various posters are being used to stress the importance of *EYE CARE*.

Since eye injuries have been greatly reduced here at Ecusta in recent months, there is no doubt but that the use of safety goggles has played an all-important part in this reduction. There are times however, when employees are prone to do *chipping and grinding* without their goggles,

This photo shows Norman L. Thompson of our Maintenance Department, using a pair of "Mono" or "Fullface" goggles while working on the *grinder* in the Machine Shop. This safe operating procedure should be followed by all men doing this type of work. (Note the sign on the *grinder*).
