

ABOVE: View showing Bath Mix House foundation in foreground and Coating Tower steel beyond.

AT RIGHT: Taken from Fan Room No. 1 on upper level of Viscose Ripening Room, this view shows the wet end of Casting Room. Casting Machine foundations are being set and aligned. Internal and external brick walls erection has progressed to point where greater part of machine installation must now be done under lights.

BELOW: Looking north at the structural steel and tank installations of the Solvent Recovery Building. In this building, evaporated solvents from the Coating Tower process will be recovered.
