

WHAT HAS HAPPENED TO OUR PARKING ?

Our parking lot has been resurfaced, walks have been built, and the area has been marked so that more cars than ever can be parked in the area. Yet, we have not been able to take care of as many cars as we did in the old parking lot. This doesn't sound logical, but it's true.

The reason is that we are not parking as planned. Cars should be parked at the proper angle between the black lines marked on the curbs. Some employees are taking up two spaces, some are pulling upon the walks, and many are parking at an angle that prevents other cars from being parked in the next space.

Whenever we park, let's give a little thought to fellow employees who will be following us. The reason that many cars have to park at the far end of the parking area, is because of the thoughtlessness on the part of many of us.

Don't park just for the sake of parking—park right.

The car shown below has been seen, parked on the walk, several times. These walks were put in the area so that employees can keep out of the traffic lanes. They should never be blocked.
