

The "commercial" of a recent Buick-Berle network television show compared the penetrating power of a 30-30 Winchester bullet with the compression of the Buick engine. Above is a scene in the Ammunition Research and Development Laboratory of the Arms and Ammunition Division of Olin Industries at New Haven, Conn., where the production crew of the Buick show made the motion pictures that were used in the

commercial. Above, left to right, are James Lewis, cameraman; Morton Connachie (kneeling); Michael Slifka and S. Skirpan, all of the Morton M. Connachie Productions crew; Bruce Allen representing the Kudner Agency (at the right); and firing the Winchester Model 94, Burt Wade of the Ammunition Research and Development staff. A bullet from the Model 94 was fired into the wooden blocks on the stand at the right.

Clyde G. "Speedy" Jones was photographed (right) as he received congratulations from Vinson K. Shannon. Speedy was elected president of the Southeastern Division of the American Pulp and Paper Mill Superintendents Association at the annual meeting at Edgewater Park, Mississippi, on October 28-30. He was First Vice-President of the group last year. Mr. Shannon of The Mead Corporation is the retiring president.
