11. Fire fighting equipment: a. In place, b. Easily accessible c. In working order, d. Sprinkler valves open, e. Sprinkler heads unobstructed, f. Alarms in working order.

TO PUT OUT A CLOTHING FIRE

1. DO NOT RUN—Running fans the flame.
2. If possible wrap yourself in a rug, blanket, portiere or woolen coat. Wrap it around your neck first. Drop to the floor and roll over slowly.
3. If there is nothing to wrap in, drop to the floor and roll over slowly.
4. Try not to inhale any of the flame. Put your left hand on right shoulder and right hand on left shoulder and pull arms against face for protection.
5. If there is water near at hand, douse yourself with it and roll in the spilled water on the floor. If the clothing of another person takes fire, use similar measures. It may be

necessary to trip or force him to lie down so you can roll him. Then if water is handy, apply it at once.
