driller, drilled the well for our soft water supply at Plant #4. He died in 1942.

Her son, John Edd Cummings, is employed in the finishing room of Plant #4. He lives with his mother at 301 South Main Street in Kernersville. Mrs. Cummings has two daughters, Mrs. R. J. Foster of Winston-Salem and Mrs. R. E. Wootten of Greenville, S. C.

"I didn't want to retire until I reached retirement age, but my doctor said I should. It was no easy decision. I liked my work there at the plant; everybody has been so good to me. I certainly think it is a fine place to work," said Mrs. Cummings. "I'm glad John Edd is working there; he enjoys it, too."

## SUE BINKLEY

Mrs. Sue Binkley, inspector, Plant #4, is retiring May 11 on the basis of age. Mrs. Binkley has been an inspector at our Kernersville plant since 1925.

She was born and reared in the Bunker Hill section and came to Kernersville about the time she started to work for Adams-Millis. Her husband died several years ago, leaving her with a young son.

"I guess I have done very well at Adams-Millis. I have bought and paid for my home working here and at the same time had to rear my son. Now I plan to visit a few weeks with friends in Virginia and then come back home to get

a little rest and pleasure out of life. Of course, you know I will be back up to the plant to visit quite often."

Mrs. Binkley's son, Rex, was formerly employed in our Kernersville plant. He and hisfamily live with his mother.

Commenting on her decision to retire, Mrs. Binkley says it isn't easy to make up your mind about retiring, but "I have decided I have worked long enough to stay at home for a while."

Mrs. Binkley admits that she played "hookey" one day last year. Of course, she was absent due to illness and business at other times, but stated that during her 30 years and 5 months with Adams-Millis she missed only one day simply because she wanted to stay at home.

## I.M.C. CONFERENCE

Sam Dale, Plant #1, will attend the annual conference of the National Council of Industrial Management Clubs in Fort Wayne, Indiana, the first week in May. Sam is one of eight delegates attending from the High Point Industrial Management Club.

A charter member of the local I.M.C., Dale is key man for Plant #1.

The purpose of the I.M.C. is to sponsor the education and development of supervisors in industry. The club meets once each month with outstanding speakers and conducts workshops on topics selected by the membership. These topics are designed to offer supervisors the opportunity to exchange ideas and experiences.

Forrest Edwards, Plant #7, represented Adams-Millis at the National Council in Reading, Pennsylvania, last year.

David Williams, son of H. O. Williams, Main Office, recently proved himself champion speller of Junior High School. Just wondering if he has enrolled his father for a night course yet. . . . .
