PLANT #7 IS LANDMARK IN DOWNTOWN HIGH POINT

Site of Many Important Developments in Hosiery Production

AMCO NEWS this month salutes Plant #7 of Adams-Millis Corporation, a landmark in downtown High Point and the site of many important developments in the production of ladies' hosiery. Today, Plant #7 encompasses approximately 100,000 square feet of floor

space which includes the original plant built in 1928 on Pine Street and the addition at the corner of English Road and Pine, built in 1932.

The story of Plant #7 parallels the development of hosiery as it is known today, with production in this plant extending from the era of the

original silk stockings, through the rayon, nylon and stretch-nylon eras. Today finds #7 producing the latest styles in pantyhose, knee-highs, ankle-lengths and stockings. Interestingly, some regular nylon hose are still produced for suppliers
