DURHAM, NORTH CAROLINA

Provost Names 4 Appointments To Duke Faculty

Four academic appointments have been announced at the Medical Center by Dr. Frederic N. Cleaveland, provost of the University. Those named to new posts are Drs. Joseph B. Workman, Ruth L. Peschel, Jesse D. Hall and Walter G. Wolfe.

Dr. Workman, appointed associate professor of radiology, comes to Duke from a position as associate professor of medicine at the University of Maryland. After receiving his medical degree at the Maryland School of Medicine in 1946, he took his postdoctoral training at University Hospital in Baltimore.

He was also director of the Radioisotope Laboratory at University Hospital.

Dr. Peschel was appointed assistant professor in the Department of Medicine. She received her M.D. at the University of Berlin in Germany in 1930. She came to Duke in 1947 as a research assistant in medicine. In 1960, she was named research associate and in 1969 associate in the department.

Dr. Hall, a practicing physician in Griffin, Ga., for the last 11 years, was appointed assistant professor of community health sciences. He graduated from Emory University Medical School in 1956 and did his postdoctoral training at New England Center Hospital in Boston and North Carolina Memorial Hospital in Chapel Hill.

Dr. Wolfe, a graduate of Temple University Medical School, was named to an assistant professorship in surgery. Following an internship at Philadelphia General Hospital, he served his residency at Duke. In 1970 he was named chief resident and instructor in surgery at Duke and in July of 1971 was named teaching scholar in cardiac surgery.

MAKING PROGRESS—This is an architect's drawing of the new Alexander Sands Building now under construction adjacent to the Nanaline H. Duke Building on Research Drive. The Sands Building will house offices, classrooms, and laboratories for the Department of Anatomy in addition to research labs of the departments of medicine, surgery, and psychiatry.

Adolescence Clinic Established; Dr. Sam Yancy Named Director

In an attempt to bridge the "adolescence gap" between childhood and maturity, Duke has established an Adolescence Clinic.

The clinic is aimed at young people who are at that in-between age and unsure whether to see a pediatrician or see an internist.

Directed by Pediatrician Sam Yancy, the clinic is supported by the departments of psychiatry, internal medicine, and obstetrics-gynecology in addition to pediatrics.

"The emphasis," Dr. Yancy explained, "is on behavioral orientation, or what is called the 'second diagnosis.'"

This "second diagnosis," he explained, grows out of a legitimate physical complaint "which is a ticket into the doctor's office to discuss the real problem."

As an example, he said, obesity might be the physical problem, but it could be only a reflection of an emotional problem

that expresses itself in over-eating.

"Drugs can be another big problem," the doctor said, "but drug-taking really can be a symptom of many other things, such as socio-economic factors or disharmony in the home."

Gestures of suicide are another area of concern for the Adolescence Clinic. "It's important," Dr. Yancy said, "to recognize what brought about the attempt and to point these people in the direction of some help."

Dr. Yancy explained that while the clinic is behavior oriented, this does not mean to imply that all problems or complaints involving patients in the 12 to 18 group are emotional or behavior problems.

"We're trying to find the mid-point where we can direct them toward help, whether it's psychiatric, psychological, or medical help that's needed," he said.

Referrals to the Adolescence Clinic can be made by calling ext. 2613.
