On-Location Movie Scenes To Be Filmed Here

Lights, Camera, Action...Duke

Duke Hospital, Duke West on Erwin Road and Duke Chapel will provide the scenes for some on-location filming for a movie during parts of the coming two weeks.

A motion picture company from Taiwan will be shooting scenes here for a movie about a North Carolina State University student from Hong Kong who died of cancer at Duke in 1974.

Sometime during the following week the crew will move on to Raleigh to film on the N.C. State campus.

Award-Winning Director

The movie, "The Lasting Love," is being directed by David Ting who has won three Asian Film Festival awards for best director in 1974, best director and screenplay in 1975 and director of the best film in 1976.

Ting has made two previous visits to Duke and to N.C. State making preliminary arrangements for the on-location camera work. Ting, who has offices on Taiwan and in Hong Kong, will bring a film crew of about 20 people from Taiwan and from this country.

The film will center on the life of Fred Chan, who was born in Hong Kong in 1949, son of a

newspaperman. In the fall of 1969, Chan entered N.C. State to study electrical engineering. He received his B.S. degree in 1972 and entered graduate school with the aim of earning a doctorate.

But early in his student career, in April of 1970, he entered Duke Hospital where he was diagnosed as having a malignant tumor of the thymus gland.

Continued Studies

Over almost the next four years, while continuing his studies at State, Chan underwent surgery, radiation therapy and other treatment during four more admissions to Duke Hospital.

He entered Duke the last time on Feb. 8, 1974, and died the following day.

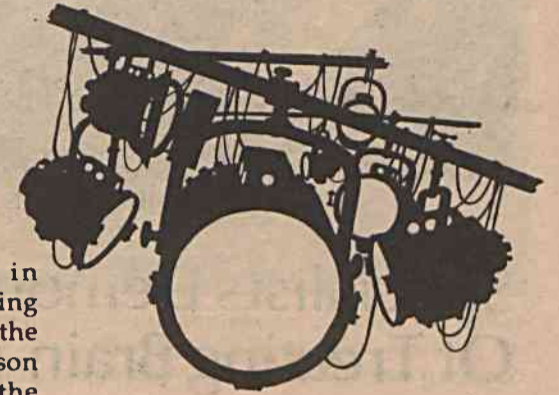

Chan's father subsequently wrote a book about his son, in which he

told of his son's courage in continuing his studies while facing terminal cancer. He also wrote of the support and encouragement his son received at N.C. State and the kindness and care he received as a patient at Duke.

Director Ting read Chan's book and began making arrangements last year to make it into a movie. A spokesman for Ting's group said he believes this is the first time a company from Taiwan will have done on-location filming in the United States.

On Location

Beginning about Tuesday here and continuing into the first of the following week, they will be filming interiors and exteriors of the hospital, including surgery, radiation therapy, a patient room and other areas, some of which will

be shot at the Duke West unit in the Durham Rehabilitation Center.

They also will spend a day shooting a scene that takes place in Duke University Chapel.

The crew would expect to move on to Raleigh to film at N.C. State the last week of June and in early July.

When Ting was in North Carolina earlier this spring he said the movie would be primarily for Chinese-speaking audiences but he had not ruled out the possibility of its being released in the United States with subtitles or dubbed language.

First Dean of Medicine, Allied Health Dies

Dr. Thomas DeArman Kinney, Duke's first dean of the combined medical and allied health education programs and 15-year chairman of the Department of Pathology, died early Sunday morning (June 12) at his home here.

He was 68 and had been in declining health for several months with cancer.

Persons wishing to make memorial gifts in Dr. Kinney's name

may do so to the Duke Medical Student Loan and Scholarship Fund, Box 3701, School of Medicine.

A memorial service was conducted Wednesday in Duke University Chapel.

Since reaching mandatory retirement age and relinquishing his administrative positions in 1975, Dr. Kinney had retained his faculty appointment as R.J. Reynolds Professor of Medical Education.

Survivors include his wife, Dr. Eleanor R. Kinney of Durham, a former assistant professor of nursing at the University of North Carolina in Chapel Hill; a son, Tom, an assistant professor of pediatrics at the University of Pennsylvania; three daughters, Eleanor, an attorney in Cleveland, Hannah, a physician at Children's Hospital in Philadelphia, and Janet, a second-year medical student at Duke; and a grandson, Tom, of Philadelphia.

International Reputation

While acknowledging Dr. Kinney's international reputation as a pathologist, Dr. William G. Anlyan, vice president for health affairs, called special attention to his contributions to medical education at Duke.

"Dr. Kinney was a pioneer," Anlyan said, "in developing and implementing our new curriculum in medical education, and he was the first head of the new combined M.D.-Ph.D. program to produce medical scientists for the future."

Beyond that, Anlyan said, "Dr. Kinney at all times was able to perceive the student point of view, and he stood as their strong advocate."

Distinguished Teaching

He noted that in recognition of this relationship, the medical students this year, entirely on their own, established the Thomas D. Kinney Award for teaching excellence to be awarded annually to a faculty member, as it was this year to surgery chairman Dr. David Sabiston.

Seminar Being Conducted By Leaders in Field

An English couple who are considered pioneers in their field will conduct a seminar this weekend sponsored by the hospital and the Department of Physical Therapy.

The "Adult Hemiplegia Seminar" which began this morning in the Hospital Amphitheater is expected to draw some 200 health professionals from North Carolina and other states.

The program will offer physical therapists, occupational therapists, nurses and physical therapy assistants a clear presentation of the rationale for, and demonstration of, the Bobath method of treating adult hemiplegic patients. Hemiplegia is paralysis of one side of the body.

Have Changed Focus

Dr. Karel Bobath and Berta Bobath, his wife, will give lectures and demonstrations of the therapy technique they have developed during their professional careers which span more than 50 years.

Robert C. Bartlett, professor and chairman of physical therapy, (Continued on page 2)

INTERNATIONALLY KNOWN—This portrait of Dr. Thomas D. Kinney hangs in the Hospital Amphitheater. Duke's first dean of the combined medical and allied health education programs, he had an international reputation as a pathologist.
