

Introduction to Data Processing

Recently there has been introduced a joint course in Computer science at Fayetteville State University and North Carolina State University. This is one of the courses that we have long waited for. Many students here have enrolled and find this course more interesting than they anticipated. The staff consists of two teachers from FSU and two from NCSU. The two instructors from FSU are Dr. Henry M. Eldridge, Chairman Dept. of Math., and Mrs. Sylvia Black, also of the Math Dept. The two from NCSU are Dr. Robert J. Fornado and Dr. Yale N. Patt.

- Paul Spruill

Dr. H. Eldridge
chairman, math.

case, preferably with an "external" person as chairman. External persons might be chosen from other schools within an institution with many schools, from another campus of a multicampus institution, from other nearby campuses, or they might be lawyers or judges. "Such a selection process should add objectivity and fairness to the procedures and relieve fellow members of

face-to-face groups from the personal difficulties of service in such cases."

... Moments of Truth ...

(Continued from page 5)

Silverman is a consulting mathematician at Hughes Aircraft's Space Systems Division, is instructor at the UCLA Mathematics Extension, "Problems and Conjectures" editor for the Journal of RECREATIONAL MATHEMATICS, and vice president of the Chester Conklin Fan Club.

He is chief consultant for the Litton Industries' "Problematical Recreations" series as well, and still finds time for such hobbies as horseback riding, body-surfing, boogie-woogie and jazz (vintage 1930), ancient Greek and Roman satiric poetry, English literature of the 17th and 18th centuries -- and, of course, puzzles, problems, and games of which he claims to have a book collection exceeded, if at all, only by the Library of Congress. In the words of Silverman's favorite writer and modern expatriate, "Before they made Silverman, they threw away the mold."
