**OPPORTUNITIES FOR SERVICE**

Theme of Y. W. C. A.  
 Discussion

When we think of opportunities for service we so often apply them to future activities, said Ruth Levering, leader of the prayer meeting service Jan. 12. John 13 was read and the beautiful story of the lowly service of Christ was commented upon. The leader's definition of service was helping one another to a better life and making it easier for others. In order to help one's fellow students along and to find many opportunities for service on the Campus, one must be accommodating and cheerful.

Then too, while we have opportunities to help our college through the work of the County clubs, we may show by our activities at home what Guilford really does for its students.

In our home communities we may influence others to get broader views and in this way be of immense service to Christ. We are preparing ourselves for our life work. Our future service is largely being determined by our present activities. Let us not then shun the little things of life, for in so doing we are disregarding that splendid example of Jesus Christ.

This message led many other girls to give their views of the opportunities for service on our Campus. Personal experiences were given bearing on the subject. Several girls brought out the point that many people mistakenly regard service as something that can be entered into at will without due preparation. We no longer regard any of the things that count as chance propositions. There must always be days of preparation.

**SPOT TAYLOR LEADS Y. M. C. A.**

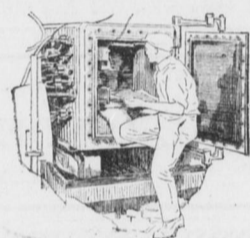

Y. M. C. A. Hall Jan. 12, 1922.—“Making the life I must live the life I ought to live,” was the subject which was discussed by the leader Mr. J. S. Taylor Jr., and other members of the association.

The subject was discussed from ten different standpoints, namely: (1) We are born for a crown. (2) We are born into the world for a purpose. (3) Christ is the life saver. (4) What is life for? (5) Time for development is necessary. (6) Some chart is necessary to point us along the way. (7) We must have self-confidence. (8) We must possess the spirit of giving. (9) We are born for service and (10) prayer is the master key.

There is no crown without a cross, a cross of suffering, sorrow, and toil, stated the leader. We must do God's will while we live upon this earth. We cannot afford to disobey as did Adam and Eve. The poison of the serpent who lived at the time of Adam is still on duty and is trying to ruin souls. He has that same power to kill.

Most of us possess a limited amount of executive ability, and talent. These to become efficient must be developed. It requires time, and not only time but the ever indwelling Spirit of God, to develop a good personality. A character without the indwelling Spirit of Christ is futile. We must grow in grace.

We must give our lives to the task of serving humanity. We may give to our associates through the channel of self-denial. Any true profession is a service. It has been said that, “He alone is good who is good to others.”

**What Is a Vacuum Furnace?**

In an ordinary furnace materials burn or combine with the oxygen of the air. Melt zinc, cadmium, or lead in an ordinary furnace and a scum of “dross” appears, an impurity formed by the oxygen. You see it in the lead pots that plumbers use.

In a vacuum furnace, on the contrary, the air is pumped out so that the heated object cannot combine with oxygen. Therefore in the vacuum furnace impurities are not formed.

Clearly, the chemical processes that take place in the two types are different, and the difference is important. Copper, for instance, if impure, loses in electrical conductivity. Vacuum-furnace copper is pure.

So the vacuum furnace has opened up a whole new world of chemical investigation. The Research Laboratories of the General Electric Company have been exploring this new world solely to find out the possibilities under a new series of conditions.

Yet there have followed practical results highly important to industry. The absence of oxidation, for instance, has enabled chemists to combine metals to form new alloys heretofore impossible. Indeed, the vacuum furnace has stimulated the study of metallurgical processes and has become indispensable to chemists responsible for production of metals in quantities.

And this is the result of scientific research.

Discover new facts, add to the sum total of human knowledge, and sooner or later, in many unexpected ways, practical results will follow.
