

MANY IMPROVEMENTS MADE ON THE CAMPUS

Water System Has Been Improved and New Basement Dug Under Cox Hall.

MANY WALKS ARE TOP-SOILED

During the past summer the college has been doing considerable work on the campus and repairing the buildings.

Among the many things which have already been completed and are under way, besides all the buildings having been repaired, Mr. Turner, the new business manager, is having a new basement dug under Cox Hall. Also the building of a long terrace at the west end of Founders Hall will soon be completed.

The majority of the students are believing that the campus has been converted into a grave yard in places, due to the appearance of little red mounds and torn up soil, but they probably don't know that the college water system and sewerage system have both been remodeled or newly built.

Mr. Turner has a very full schedule of work for the coming year, one of the important things being the top-soiling of the walks and drives of the campus. There is also to be a new heating system installed in President Binford's home as well as one in the other college cottages.

THREE NEW COURSES IN ECONOMICS GIVEN

Class In Debating Will Be Taught By Prof. George Wilson, Head of English Department.

GENERAL MANAGEMENT COURSE

It is with much enthusiasm that the old as well as the new students look over the new curriculum. There are being offered among the courses one of especial interest. This course in "general management" deals primarily with special fields as factory management, employment management, farm management. Mr. P. Evans Coleman, of New York City, Professor of Economics and Business will have charge of this department.

It is probable that the course in debating, which is usually offered in the spring term, will be reversed to the fall term. This change will benefit those taking part in the fall debates. Professor George P. Wilson, who heads the English department, will have charge of this debating class.

Irate Father—Young man, have you ever kissed my daughter?

Young Man—I really couldn't say, sir.

Irate Father—What! You can't say?

Young man—No, sir; you see, sir, I promised her I wouldn't tell.

GUILFORDIAN OFFICE HAS HOUSE CLEANING

Old Green Burlap Has Been Cast Into Junk Pile and Pictures Rearranged.

Even in the newspaper world revolution is common. For the first time in several years the Guilfordian Room went through the strange process of house cleaning day. The old green burlap that has stood the weather for so many years was savagely torn away and the two side benches which have heretofore been used for a doormat rather than for seating purposes, were cast into the wood pile. In their place three chairs were substituted. The pictures that had been hanging in zig-zag fashion were placed artistically on the wall. The walls have been brushed and the window cleaned and several waste baskets full of old papers were discarded as trash.

Mr. Turner, the new Business Manager, has promised to have a brighter light with a reflector installed soon. This will give a more uniform light that will enable more to work around the table without strained eyes.

With the new Yale lock that has been attached to the door it is hoped that the Guilfordian room will be kept in a tidy condition and will be used more for business and less for private social gatherings.

An acre of performance is worth a world of promise.

MURRAY WHITE, Student Representative

AN APPEAL TO ALUMNI

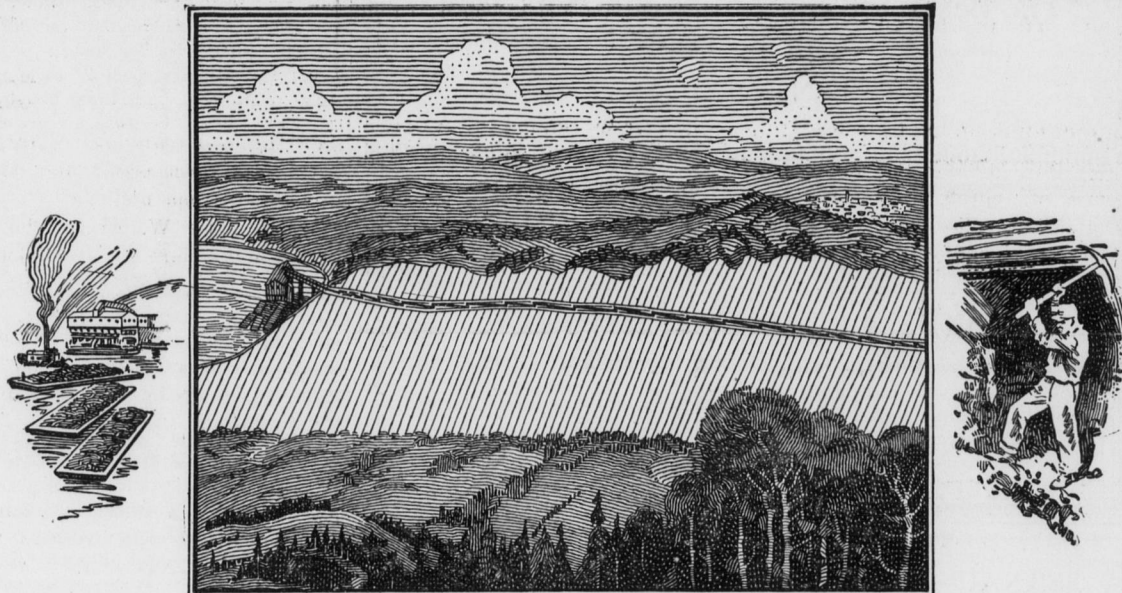

Guilford College has just witnessed one of the most auspicious openings in all the illustrious years of her history. Many improvements have been made, and additions to her material plant are numerous. New students have come in large numbers to secure the benefit of her enlarged resources. The feeling is general about the campus that this year will prove to be the very best that Old Guilford has ever enjoyed.

The staff of THE GUILFORDIAN believes that our College paper should keep pace with the advancement of which we see evidences all about us. It is their desire to give GUILFORDIAN readers this year the best newspaper they have ever had. At considerable increase of cost the paper has been enlarged and, we hope, improved.

But our paper must not be considered the concern of the editorial and business staffs alone: its purpose is to serve the best interests of Alma Mater. To that end it deserves and needs the support of all who hold in their hearts a warm spot for Old Guilford.

We present this first issue with apology, for it was of necessity prepared in haste. But more and better things are in store for our readers, and we do not wish that anyone who has an interest in the advancement of Guilford should miss these good things.

On page two you will find a subscription blank waiting for your signature. Lest you forget, fill it out now and send it in, and help us count the milestones on the path of progress for Alma Mater.

Four-mile belt conveyor—the longest in the world—installed in a Pennsylvania mine for transporting coal from mines to river barges. Electric motors operate this conveyor.

90,000 Wheelbarrows in one hand

A button is pressed. An electric motor goes to work, followed by another and still others until twenty sections of a belt conveyor four miles long are in operation!

Through an abandoned mine runs this giant wheelbarrow carrying nine thousand tons of coal per day in a steady stream from the miners to the coal barges on the Monongahela River. One man controls it with no more effort or concern than pressing a switch button. Electricity pushes it.

Not only conveyor belts of all sizes, shapes and kinds, but also hoists, tractors, cranes, elevators, stackers, locomotives, and other material-handling equipment have gained flexibility, dependability, and ease of control through electric motorization.

Moving things in one way or another is the educated man's work in life. And electricity, ever at his command, is moving more and still more of the things which move this new world of ours.

The General Electric Company has devoted years of study to material-handling and transportation problems. In its own vast plants the handling and moving of materials and products have been simplified to the highest degree, thus providing a daily demonstration of the value of electricity.

A series of G-E advertisements showing what electricity is doing in many fields will be sent on request. Ask for booklet GEK-1.
