

The Guilfordian's Guide to the Cosmos

November

Sky Chart

We guessed you might be spending at least some of your vacation lying around. So if you should happen to look up, you might notice some stars, and you might wonder what they are. This sky chart is designed to correspond to the sky at 9 p.m. in the middle of the month and 8 p.m. at the end of the month, eastern standard time.

Happy trails!
