

# GRAMMAR GRADE DEPARTMENT

## P. T. A. REWARD

The Sixth grade wants to thank the parents who have been coming to P. T. A. and voting for the grade. We hope more parents can come next time. We want to especially invite the fathers for the November meeting.

The Sixth grade has won the grammar grade attendance reward for September and October. We are enjoying the beautiful flowers that Mrs. E. C. Griffin, our P. T. A. president, sent us as a reward. We are anxiously awaiting the picture which we are to receive for the month.

## A KELEK

A kelek is a raft that can only go down stream. This raft is made by tying poles together. Beneath the frame are tied inflated goat skin bags. The people of Mesopotamia use this raft to carry their baggage and freight downstream. At the end of the journey the raft is taken to pieces. The skins are tied in bundles and loaded on a donkey to be carried back home while the poles are sold.

## THE HOUSES IN BAGDAD.

Houses in Bagdad are built of sun dried bricks. All houses have flat roofs. Usually the rooms are built around three sides of an inner court. Most homes are two stories with over hanging windows and balconies. The overhanging windows and balconies help to shade the very narrow streets in Bagdad.

## HURRAH! NEW BOOKS

The pupils of the sixth grade are going to new and interesting places these days and meeting many new friends because of the lovely books which have been added to our school library and the community library.

"On Artic Ice" has taken us far in- to the north; "Moccasined Feet" and "The magic Painter" into the Indian tents; "Honey Chile" into the negro cabin; "Tom of England"; "The Lad of Dundee" across the Atlantic. We have traveled with "Turry Gay" in a house boat, have gone with "Fire the Mascot," on a fire truck; have ridden "Noble, The Police Horse", have longed for a pair of "Copper Toed Boots" like Shad wanted. In fact we have gone every where in "Travel by Land, Water, and Air".

## IT'S POPSICLE TIME

"It is better late than never.", therefore, the sixth grade is trying to learn or review the multiplication table. Those making a perfect score each day on the fifty most difficult combinations receive a popsicle. It is a good way to create interest but a little expensive for the teacher.
