

# Class Puts Knowledge Into Practice

Geometric designs become live figures as the geometry class begins preparation for Open House.

The geometry designs were constructed out of colored wire pipe cleaners and then glued onto colored construction paper.

"Since we girls cannot enjoy the various machinery used in the shop by the boys while preparing the card table top, we will play with these wires by making illustrations of theroms and propositions used on class," Miss Edith Farmer stated when the class began the project.

A blackboard protractor has also been made by the class.
