Classes Invest In Stock Market

The American Problems classes, under the direction of Mr. Gibbs, Miss Bishop, and Mr. Altman recently concluded a unit on the stock market and its economic system.

To make their study enjoyable as well as educational, the students were given an imaginary sum of \$200 to invest in the stock market. They watched their investments for a period of several days, during which they sold their shares when it seemed profitable. At the end of the allotted time, the person who made the most profit in each class was to receive a small prize.

Besides this imaginary investing, the members of the combined classes pooled their resources and invested any amount from fifty cents in a stock which was chosen by a professional stock broker. One hundred fifty-three dollars was collected and invested in Brunswick, a company which manufactures medical supplies and sporting goods. Dividends from the stock are to be divided among the stockholders according to the amount invested. At the end of this school year, the stock will be liquidated and distributed among the investors who will be eagerly awaiting their fortunes or their bankruptcy.
