

Organization Changes Announced At Towel Mill

R. D. Hundley

R. L. Jamerson

Walter Danhoff

R. S. Martin

C. J. Jones

The company has announced the appointment of R. D. Hundley, Cloth Room foreman, as night superintendent of the Towel Mill and of Robert L. Jamerson, night foreman of the mill, to foreman of the Weave Room.

Other organization changes announced included: Walter Danhoff, from weaving foreman to Cloth Room foreman; Ray-

mond S. Martin, from assistant foreman to shift foreman in the Weave Room, second shift; and C. Jackson Jones, from assistant foreman to shift foreman in the Weave Room, third shift.

Mr. Hundley has been associated with the company for more than 40 years. In his early years, he worked on production jobs and as assistant foreman

in the Weave Room. He was foreman of the Weave Room from 1940 through 1956 and was foreman of the Cloth Room from 1956 until he was named night superintendent.

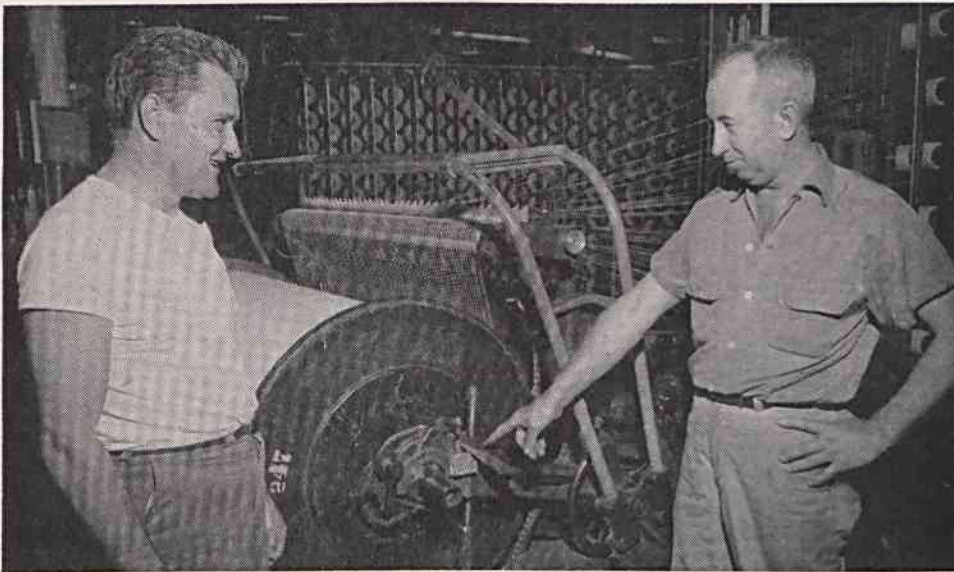

Mr. Jamerson worked in the Towel Mill Weave Room until he entered military service in World War II. He was in service 1943-1946 and upon his return, again worked in the Weave Room. He later was in the Production Control Department and the Standards Department. He was named assistant foreman in the Weave Room in 1954 and became night foreman in July, 1960.

Mr. Danhoff joined the Towel Mill in October, 1955, and served as night superintendent until he was named foreman of the Weave Room in May, 1959. He continued in the latter position until he was transferred to the Cloth Room as the foreman of that department.

Mr. Martin has over 35 years of continuous service with the company and has worked the entire time in the Towel Mill Weave Room. He was a weaver for over 10 years and a loom-fixer for over 15 years. He was promoted to assistant foreman in 1953, and has been a supervisor continuously since that time.

Mr. Jones was first employed in 1956 as an overhauler helper in the Towel Mill Spinning Department. A few months later he was named special overhauler and continued in that capacity until he became a supervisory trainee in 1958. He has been assistant foreman in the Weave Room since January 1, 1960.

Bedsread Mill Man Develops Safety Device

Clyde Carter, right, discusses safety switch with Marion Edwards, warper tender.

A Bedsread Mill employee has developed a safety device which has been attached to all of the warpers in the mill.

Clyde Carter, a fixer in the Winding Department, devised a microswitch which stops a warper immediately if something happens to the locks holding the beam. The switch also prevents a warper from being started if the beam is not properly locked in.

Mr. Carter had observed the potential danger of a heavy beam revolving at high speed. He began thinking about some way to make the warper inoperative when a beam was not held securely in the proper position in the machine. He devised the microswitch which

worked successfully and was immediately adopted by the mill.

Officials of the Bedsread Mill have congratulated Mr. Carter on his interest in safety and ingenuity in working out the improvement.

In commenting on the achievement, Giles Hunnings, superintendent, said: "Safety consciousness by employees determines the effectiveness of our safety program. Mr. Carter's initiative in developing this safety switch shows his interest in the safety of his fellow-employees as well as himself. I am sure that with this type of attitude towards safety by our employees we shall continue to eliminate any unsafe acts or unsafe areas in our plant."

Production Leaders

Highest production award winners in the various departments at the Karastan Spinning Division at Greenville for the month of April were:

- | | |
|----------|---------------------------------|
| Carding | William Whaley |
| Spinning | Margaret Brody
Hazel Lockamy |
| Twisting | Lillian Sutton |
| Reeling | Esther Harris |
