Fine Arts Festival At FSTC Hears State College Prof.

al Fine Arts Festival at the Fayetteville State Teachers College. Fayetteville, N. C. sponsor-ed by the Area of Music and Fine Arts began on Monday May 3 when an assembly lecture on the nature and place of art was given by Professor Duncan R. Stuart of the School of Painting and Design at the North Carolina State College at Kaleigh, North Carolina. At the conclusion of his discourse, Mr. Stuart explained the origin and character of a number of his own prize-winning productions.

Wednesday saw the pre-sentation of the dance group from the local E. E. Smith High School which featured such numbers as "Clair De Lune", "Jacob's Ladder", and "Slaughter on Tenth Ave-nue.'. On Wednesday even-ing came a program by the city and county schools of Fayetteville, and on Thursday, the students of music at the college appeared in re-Senior Alva Chaplin cital. sang "Ah, Love But A Day" and "The Answer", and Charles Richardson, a senior

Several reperfect record of 8 wins and no losses for the season and is exports of "very good" condition were received for the first timepected to offer some tough competition. Cicero Warren is slated these being fairly well scatered to start for the Grays., over the state.

QUESTION: Can tea be grown well. In general one might say successfully in North Carolina? that where camellias grow, tea ANSWER: The tea plant can be can grow also. The prospect of grown in North Carolina but the marketing North Carolina grown state is certainly on the edge of tea would seem to be slim. Atits survival range. It will prob-

tempting to grow tea in an area where it is not ideally suited, and then trying to market it in competition with cheaply produced Oriental teas would not be practical.

QUESTION: Is the nitrogen content of the soil directly related to yields of corn?

ANSWER: Yes. Southern soils are generally low in nitrogen-Many researchers have found that nitrogen is the first limiting factor in corn production.

QUESTION: What is a pre-emergence treatment in regard to treating corn with a chemical weed killer?

ANSWER: A pre-emergence treatment is a spray applied to the soil after the corn is planted and before it emerges. This treatment may be considered as "in-surance" that weeds will not over-grow seedling corn, particularly in bottomland during a wei season. At recommended rates, the chemical 2, 4-D will not control established perennial grasses such as Johnson grass, Bermuda grass and quackgrass. While pres-ent in the soil 2, 4-D will destroy most germinating seeds, including crabgrass.
