

New Jack And Jill Chapter Organized In Fayetteville

FAYETTEVILLE — In a simple but impressive ceremony and surrounded by members of the sponsoring chapter, the Fayetteville chapter of the Jack and Jill Club of America, Inc. was formally installed into the organization recently.

Installation service, which took place in the lovely home of Mr. and Mrs. Ernest Miller, was conducted by Mrs. Burma Whitfield, Washington, D. C., the National Program Director of Jack and Jill of America, Inc.

Activities preceding the installation included a coffee hour, tour of the city and Fort Bragg, followed by a luncheon at the Main Post Officers' Mess honoring Mrs. Whitfield.

Preceding the ceremony the national officer was presented a corsage by the local president of the local chapter.

Following the ceremony, members, joined by their husbands, gathered first at the attractive home of Mr. and Mrs. Sylvester Reeder for a cocktail hour and later for dinner at the beautiful country home of Mr. and Mrs. E. McMullen. Each home was made more attractive than ever by club plans in decorations and the presence of friendliness and cheer.

Members of the Fayetteville Chapter are: Mesdames Marie S. Vaughn, president; Mildred Miller, vice president; Mable C. Douglas, recording secretary; Mildred G. Sharp, corresponding secretary; Earlyne C. Mitchell, treasurer; Nettie K. Daniels, historian and reporter; Madeline Black, Bertha Bridges, Mary Cherry, Pearl Gerald, Hettie LaHuffman, Dorothy Lane, Marion Mancel, Margaret C. McDaniels, Maybelle Payne, Lee Reeder, Jessie Vick, Mary Allen, Etrula Comberfort, Inez Eastley, and Beulah Quick.

Visiting members present for the affair were members of the Wilmington and Greensboro chapters of Jack and Jill.

Use one-fourth ounce seed per 100 square yards in seeding flue-cured tobacco beds. Plan your tobacco plantbed well.

MUCH TO WORRY ABOUT—Solomon S. Small and Mrs. Helen Mack present varied emotions as they were pictured in a Chicago police station, following a police raid upon Mrs. Mack's Southside apartment. Police uncovered one of the largest narcotics caches in history when 20 pounds of pure heroin, worth \$2,500,000, was allegedly found in the flat and in a rear garage. (The Express Photo.)

Yields increased as more nitrogen was added-up through the 0.9 pound per tree rate. There was a relationship between pruning and added nitrogen. The heavily pruned trees showed the least response to nitrogen. The amount of added nitrogen used did not affect the size of the individual peaches.

QUESTION: Are all the different varieties of tobacco seed listed for sale under the new strain seed law recommended by the N. C. Agricultural Experiment Station for planting in 1958?

ANSWER: No. The Experiment Station does not make recommendations as to the specific variety a farmer should plant. It does, how-

ever, publish the results of its findings in flue-cured tobacco tests. These findings may be used as a guide in selecting the highest yielding, highest paying, most acceptable varieties. All a producer of tobacco seed need do to have his variety recorded for legal sale is to prove that it is a distinct variety, different from all other varieties.

Artificial breeding of dairy cows produces more milk.

May happiness be with you and yours at this Christmas.

Lena Horne Gives Formula For Growing Old Gracefully

CHICAGO, Ill.—Lena Horne, star of the smash musical "Jamaica," says that growing old can be an exciting experience for a woman over forty if (1) she has a husband whom she loves and is in love with her, (2) knows the joys and rewards of motherhood, and (3) is happy in the work she is doing.

In the January issue of Ebony Magazine, Lena says, "I've been lucky in having a wonderful com-

panion and husband. My two children, Gail and Teddy, are a source of pride and satisfaction for me. I have my family, my health, my music and now I have a wonderful new experience in "Jamaica." "I'm a better woman, too, a much better woman than I was at 30—more thoughtful, more mature, and a little wiser." And, some would add, even more beautiful.

Dr. Turner New Prexy

NASHVILLE, Tenn. — America will never be fit for world leadership until its people can get along with each other, in the opinion of Dr. E. Penn, pastor of First Baptist church, Gary, Ind., principal speaker at services here inaugurating Dr. Maynard P. Turner, Jr., a seventh president of American Baptist Theological Seminary last week.

At impressive services held at Fisk University's Memorial chapel, Dr. Penn termed democracy a "living thing" — a dynamic expression of the soul of man.

He had this to say for those people in this country who would set themselves apart from others: "It's the Christian that says this world is not exclusive, but inclusive of all men."

Dr. Turner becomes the seminary's first full-time head since Dr. Ralph W. Riley resigned in 1956. A graduate of Fisk, Eden Theological Seminary and Central Theological Seminary, Turner was formerly dean of the school of religion at Bishop College, president of Western Baptist Seminary and pastor of Mozart Baptist Church, Chicago.

Another speaker during the day-long inaugural activities was Dr. Herbert W. Brewster, Memphis, chairman of the educational board of the National Baptist Convention, USA, Inc.

Anti-Bias Group Welcomes Support Of 12 Governors

WASHINGTON, D. C. — The President's Committee on Government Contracts welcomes the expression of support contained in the statement issued in New York last week by the Committee of Governors on Civil Rights, because the task of assuring economic equality for all of America's people is one which requires the conscientious efforts of all citizens," according to Maj. Gen. Cornelius E. Ryan, (U. S. A., Ret.) Executive Vice Chairman of the Committee.

The governors of 12 states which have penal statutes which prohibit racial or religious discrimination in employment formed the Committee of Governors in Civil Rights in New York December 12.

The states are Colorado, Connecticut, Massachusetts, Michigan, Minnesota, New Jersey, New York, Oregon, Pennsylvania, Rhode Island, Washington, and Wisconsin.

Vice-President Richard Nixon is chairman of the President's Committee and Secretary of Labor James P. Mitchell is vice chairman.

"We believe, however, that the governors lacked a full understanding of our methods and accomplishments when they stated that the President's Committee has too low a budget and is too limited in its objectives," General Ryan said.

When President Eisenhower established the committee he charged the contracting agencies of the government with primary responsibility for enforcement of the non-discrimination policy.

Jazz Drummer Max Roach Wins In Magazine's Poll

NEW YORK—Further recognition was given to famed drummer Max Roach when he was chosen by Playboy magazine in their annual musicians poll as the winner of the drummer's division.

Currently rated by his asso-

ciates, critics and fans as a top stylist and creator of new rhythms, Roach, during the last five years, has copped 19 such awards. His latest Emarcy record album is a hot item in the jazz field.

The question is frequently asked: what do we mean when we speak of soil pH? Simply stated, it refers to the relative acidity (sourness) or alkalinity (sweetness) of the soil. The pH of the soil directly affects the growth of all plants and this is the reason lime is needed for some and not for others.

If we apply a set of values to the pH range, from 4 to 10, we can state the ranges as follows: 4 to 5.5, strongly acid; 5.5 to neutral; and above 7.5 alkaline.

It is common knowledge that the azalea and the camellia require acid soils with the azalea being more tolerant of acid conditions than the camellia. Applying the scale already given, the azalea would fall in the range between 4.5 and 5.7 and the camellia between 5.0 and 6.0. This is getting a little technical, but it illustrates my point. Since the ranges are not significantly different, both plants are usually grown in the same general area.

On the other side of the picture we find that legumes, such as alfalfa and sweet clover, require a pH range of from 6.5 to 7.5. Spinach, often used as a test plant, 6.3 to 7.3 gardenia, the same as camellia; cabbage, 6.0 to 7.0; tomato, 5.5 to 6.5; Irish potato, 5.0 to 5.7; sweet corn, 5.5 to 6.7; and so on down the line of plants.

Lime is used to sweeten soils and sulphur and aluminum sulphate to make them more acid. However, you should never attempt to amend your soils until you first have them tested. The test will not only determine the pH but also organic matter content and the essential available nutrient elements such as Nitrogen, Phosphorus, and Potash.

Your county agent, vocational teacher or the Soil Conservation Service in your county will be glad to help you. Some of them can run a quick test for pH, but for complete analysis, the samples should be properly collected and

State College Answers

QUESTION: Is it true that heavy pruning can cut peach yield.

ANSWER: Yes. Recent agricultural experiments have shown that peach trees that were pruned last outyielded the heavily pruned trees by 30 per cent. Individual peaches were larger on trees pruned more severely, but there were more peaches on those less severely pruned.

QUESTION: What response do peach trees give to nitrogen applications?

ANSWER: In recent tests, rates of 0.3, 0.6, 0.9 and 1.2 lbs. of nitrogen per tree were used.

sent to the Soil Testing Laboratory, State Department of Agriculture, Raleigh, N. C. Sample boxes are available in the county agent's office with complete instructions for collecting and mailing.

Merry Christmas.

Three glamorous new roses are ready for 1958. All of them are All-American Award winners and many of you will wish to add them to your collection.

The first is "White Knight." This is a Hybrid Tea variety and the only white Hybrid Tea ever to win an All-American Award. It is a pure satiny white, which, in the bud stage, is nicely pointed and about five inches across when opened. The flowers come freely and continuously and the petals do not fade in bad weather. Go whites have been difficult to produce in roses and this is also true of many of our other flower varieties. It appears that "White Knight" is the white we have been waiting for.

The plant is free growing, bushy, upright, and well branched. The leaves are a lively green, contrasting well with the purity of the white flowers. The stems are long and strong, and the blooms last well, making this variety exceptionally good for cut flowers. The plants have shown a high degree of resistance to the common rose diseases and to frost.

Now for two All-American Award winning Floribunda's. The first, Fusilier, Fusilier is a brilliant rich red. The flowers are about three inches across, with frilled edges, and come in heavy clusters. The plants grow full and bushy and to medium height. The leaves are a dark green when mature but are a reddish color when young.

The second Floribunda, Gold Cup This variety is a beautiful fragrant golden yellow. The flowers last well and the leaves are exceptionally ornamental. The plant reaches a height of about two and one half feet and blooms profusely.

If you have difficulty locating a source of supply of plants of these new roses, drop me a line and I will help you. It is not appropriate for me to give names and addresses in this column.

TO WISH YOU

Merry Christmas
