

Open To Negroes:

CAREER OPPORTUNITIES

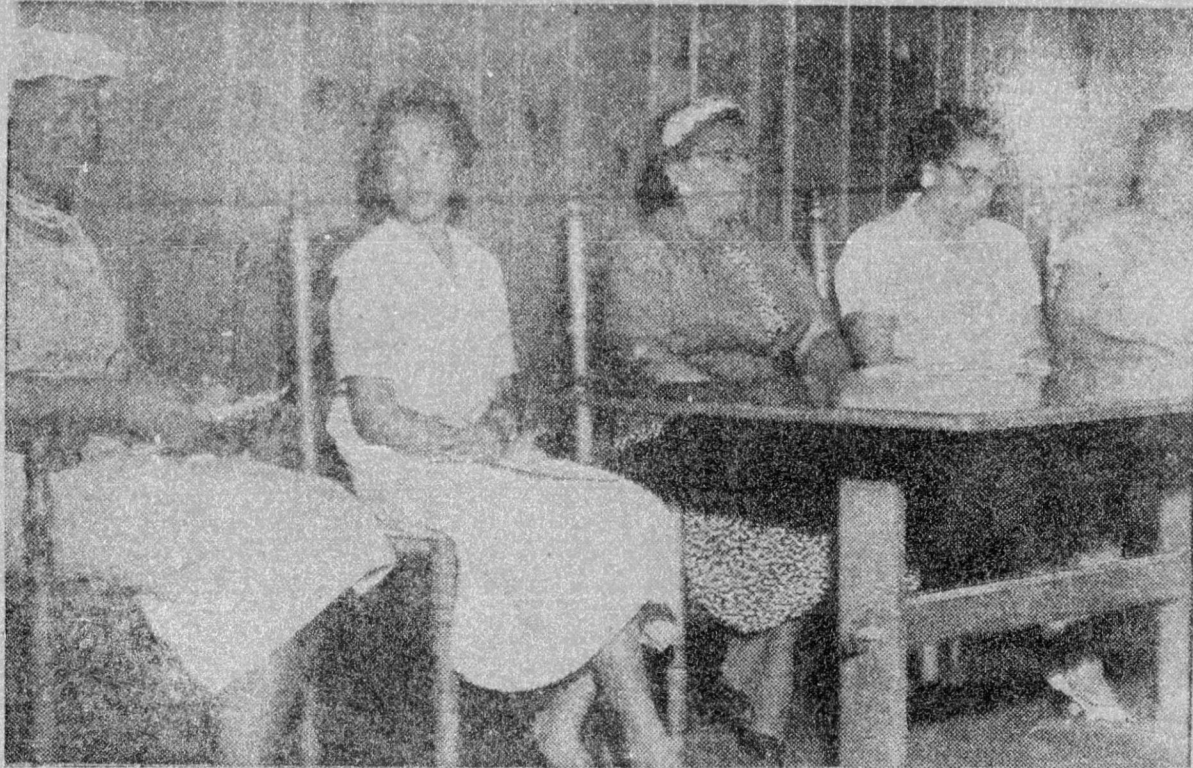

WRITING
There are a few people in this world who have the ability to write, and there is no better time to start than when one is young. Apart from the numerous possibilities in screen and radio writing, the publishing end of the field alone offers scope enough for everyone with sufficient talent and perseverance to make a place for himself or herself. A recent survey shows that roughly 2,000 magazines are printed and distributed throughout the United States each month, and this total does not include trade periodicals, house organs, and others of strictly limited circulation.

Of this 2,000 the first 130 magazines have a combined circulation of more than 200 million copies each month. In just five classes alone there are circulated: 3,223,000 detective story magazines, 9,263,000 love and adventure "pulp", 7,976,000 "true confession" magazines, 10,755,000 movie magazines, and 25,215,000 adventure "comic" books.

Good literature does not consist of 2,500 words dashed off in two hours. It takes time to write well. To become proficient in any art requires long practice.

write a certain minimum each day—you will make progress. We advise you to learn to type well. You'll find it a very valuable and priceless asset. And just as important as writing is reading. A famous writer once said a good author reads six hours for every hour he writes. Read first-class literature, both the time-tested classics and the best of modern authors. Read actively, absorb the spirit and the tone of good writing, learn its structure and technique.

Textile plants are expected to use around 3 1/2 million bales of cotton in 1958.

WOMEN HAVE ANNIVERSARY—Members of a panel which discussed "Our Witness and Our Mission" as the Women's Society of Christian Service, headed by Mrs. W. S. McLeod, observed its anniversary as a part of the 106th session of the North Carolina Methodist Conference at Bennett College on Thursday. Left to right: Miss Winifred Carter, Miss Jane Williams, Mrs. Olivia P. Womack, moderator, Mrs. Rosa Winchester and Mrs. Madeline Best.

Howard Coed Is College Consultant

WASHINGTON—Officials of Carson, Pirie, Scott & Co., one of Chicago's leading department stores this week announced the appointment of Miss Sylvia A. Taylor, a senior in the College of Liberal Arts at Howard University, as a consultant in the store's College Shoppers.

Miss Taylor is believed to be the first coed from a predominantly Negro institution to receive such an appointment in Chicago. She began work on Monday (July 7) and will continue through September 13th.

As a consultant Miss Taylor will recommend wearing apparel to teen age and college-age shoppers. She will be among 35 college consultants selected by Carson, Pirie, Scott & Co., from colleges throughout the country.

Miss Taylor is the daughter of Mrs. Katie W. Ellis of 9415 S. Prairie Avenue, Chicago. A 1953 graduate of Hyde Park High School, she is majoring in mathematics and minoring in physics and education at Howard.

At Howard Miss Taylor is considered one of the outstanding student leaders. She is a member of the Howard Players, one of the University dramatic groups; the University-wide Community Council; United Christian Fellowship; and served as secretary of the Junior Class during the past school year.

Miss Taylor is also a member of the editorial staff of the Hilltop student newspaper, and was recently elected business (president) of the Howard chapter of Alpha Kappa Alpha Sorority, the nation's oldest and largest social Greek-letter organization for Negro women.

Youths Attend Experimental Race Camps

NEW YORK (ANP)—Everybody talks about wayward youth, juvenile delinquents, and the conflicts, fear and hatred that exists between different race groups, but like the weather, no one has attempted to do anything about it—until recently.

Under the sponsorship of New York's Protestant council, an interracial summer camp was started three years ago. Last year, about 100 youths, including teen-age gang members with court records, left by bus for the experimental summer camp near Bushkill, Pa.

The group of youngsters range from age 14 to 21. The commanding officer, Ben Martin, 26, a Negro, commented: "We have some of the toughest guys in the city right now. We know what they've done and what they're capable of doing, but we will show them what toughness really is: being able to face up to problems and assume a responsible place in the community."

SEE HOW INTEGRATION WORKS
Yet another group of youngsters, not delinquents, but youngsters from all parts of the country—a Negro from the deep South; a farm boy from the Midwest; some from Burma, India, France, Israel of Finland—last week began "living together" for a six week period to see first hand how integration works.

As a white 16 year old youth from Little Rock put it, "I came up here (to the camp) to find out for myself what people are saying and thinking."

While living together at Fieldston School, Riverdale, the youngsters will ask each other questions like "How does it feel for a Negro boy to walk into a newly desegregated school through a crowd of jeering white persons?" or perhaps "How does a girl who lives on a farm in Wisconsin react to a city like New York?"

State College Answers

QUESTION: What is the best temperature for a laying house?
ANSWER: The best temperature has been determined to be 85 degrees F. A favorable range is believed to be between 80 degrees and 90 degrees F. The rate of lay, shell texture and egg size can be affected by temperature. Coupled very closely with temperature is the moisture content within the laying house.

QUESTION: When should a farmer begin spraying for boll weevils?
ANSWER: When infestation approaches 10 per cent (30 weevils on 100 plants).

QUESTION: How should I thin my pines?
ANSWER: Loblolly and shortleaf pines, that are to be thinned every three to five years, should be spaced so three to four feet of space is left between crown (top) edges. It stands 15 years of age the three-foot crown spacing usually leaves from 380 to 400 trees per acre.

It Pays To ADVERTISE

NEGROES, INDIANS, ADVENTISTS ALL meet on the mall of the public square in front of Terminal Tower, Cleveland, O., during the 48th quadrennial general conference, Seventh Day Adventist church. The three Negroes are staff members of the Allegheny conference, which consists of Negro churches in Maryland, Delaware, Ohio, Pennsylvania, Virginia, West Virginia and New Jersey. Left to right are Addison V. Pinkney, director, youth activities, Pine Forge, Pa.; Tari Hanehan, Indian delegate; William L. Chestham, president, Allegheny conference; Mrs. Haahan; and Dr. B. Simons, secretary, Sabbath school department, Pine Forge, Pa. (ANP).

At Howard University
Group Of 20 High School Science Teachers Study Radiation Biology

WASHINGTON, D. C. — An eight-week institute designed to train high school science teachers in the detection and uses of radioactive substances reached the midway mark at Howard University last week.

The institute, which is being co-sponsored by the Atomic Energy Commission and the National Science Foundation, is under the direction of Dr. Marie C. Taylor, associate professor of botany at Howard. It will continue through August 6th.

On Thursday, August 7th the institute will present a science fair, featuring radioactivity detection equipment and demonstrations of the control and uses of radioactive isotopes. The fair will be held in Thirkield Science Hall, on the campus, and will be open to the public.

A group of 20 teachers representing high schools in 14 states and the District of Columbia are enrolled in the institute. They were selected from more than 100 teachers from throughout the country who applied for admission. Each of the enrollees is under a grant from the National Science Foundation. The grant covers the cost of travel to and from Washington, tuition and fees, and maintenance while attending the institute.

The program at Howard is one of 198 being sponsored at educational institutions by the National Science Foundation this summer. In all, some 5,000 high school and 250 college teachers of science and mathematics are enrolled in the programs on grants totaling \$5,340,000. The radiation biology institute is also being held at 11 other universities.

According to NSF Director Alan T. Waterman, the summer institutes project is a part of the Foundation's program to strengthen the training of science teachers.

"College science teachers are not to be the first to stimulate an interest in science among our young people in secondary schools," Dr. Waterman said. "But if instruction is not stimulating and contains outdated concepts, it tends to weaken youths' motivations toward science careers."

Other colleges and universities conducting radiation biology institutes include Adelphi, Baylor, Brigham Young, Duke, Harvard, Montana State, New Mexico, Notre Dame, University of California at Los Angeles, and Wayne State.

Urban League Encourages Race To Seek Homes In Restricted Areas

NEW YORK — (ANP) — To encourage Negroes to apply for housing in areas where they have been unable to rent apartments or buy homes, the Urban League of Greater New York has prepared a "directory" listing 100 or more apartments, including some of the largest in the city, that either have vacancies or keep waiting lists.

The directory also lists apartment size, rentals, and addresses and telephone numbers of rental agents in the Bronx, Manhattan, Brooklyn and Queens area.

Faget L. Alvin, housing director of the League said some of the developments, but not all previous rejected Negro applicants. All are in neighborhoods that he described as largely segregated white communities.

Faget said the League would give assistance "in making a complaint to the proper government agencies" to any applicant encountering difficulty in renting or buying a home because of his race or color or religion.

The Sharkey-Brown Isaacs law has made it illegal since April 1948 to discriminate on race color, or religion in the sale or rental of most housing in the city.

Diesel tractors are usually economical purchase when the anticipated use is from 800 to 1,000 hours annually.
