

Weevil Now At Lull Says County Agent

Farmers Urged to Keep Watch on Fields For Punctured Squares

Field checks for the boll weevil on Monday and Tuesday indicate that the weevil is at a lull right now, particularly in fields that have been dusted three times. The county agent recommends that all growers dusting skip the remainder of this week and next week unless they hear from him. It is believed that growers will need to begin dusting again about the 20th to the 25th of July. The first generation of weevils are expected to come out at that time from eggs laid this season. Then growers will need to put on at least three applications, preferably at 5 day intervals, but certainly not longer than 7 day intervals. The county agent urges growers to watch their fields about 5 days carefully for punctured squares. If as many as 4 or 5 are found per 100 squares, it is time to begin dusting

again. It has been noticed that in some cases growers are using entirely too much Toxaphene than is necessary. At this time, 10 pounds per acre properly applied is sufficient and there is no need to waste money putting on more. The county agent will continue to watch fields and keep the growers informed.
