"Clothes Make The Difference" Styles in clothing have gone through ome radical changes in the last few centuries. History may prove us wrong, but most of us feel that the trend in our day has been toward more

Our clothes also can and should aid the body in maintaining normal temperature. Too much or too heavy clothing will overheat the body and, conversely, inadequate clothing can result in chill due to exposure. Either way, the body's resistance is lowered and it becomes vulnerable to illness

During these July days, we are mainly concerned with keeping cool. Sensible eating, working and playing habits during the hot days will, of course, help us cope with heat and humidity. But it also helps to wear light, loose garments which permit free circulation of air and permit evaporation of perspiration.

No hard and fast rule can be made about the amount or weight of clothing a person should wear, at this or any other time of the year. Some people require more, or heavier clothing than others. A safe practice is to stick to the type of wardrobe which is most comfortable, as well as becoming.
