Minutes Of Board Of Public Works

Edenton, N. C., February 23, 1962.

The Board of Public Works met this day in special session at the Edenton Municipal Building with the following members present: Thomas C. Byrum, chairman, Jesse L. Harrell, Ralph E. Parrish, J. H. Conger, Jr., and James P. Ricks, Jr.

Chairman Byrum advised that this meeting was called to make further decisions necessary in connection with installation of the electric lines and facilities at the former Marine Corps Air Station.

Supt. R. N. Hines recommended the use of 2/0 underground cable to serve the area immediately east of the main runway and read six quotations. He also recommended that this cable be installed in fiber conduit, 4" in size, and that the three required lines be installed approximately 2 1/2 feet underground, each line to be approximately 6 inches apart.

On motion by Ralph E. Parrish, seconded by Jesse L. Harrell and carried, Supt. Hines is authorized and instructed to secure the required material for this part of the work as soon as possible and to proceed with the installation thereof.

A letter from Mr. L. L. Lester was read to the Board, this letter setting out electrical requirements at the hangar area, water supply area, and power house area. A copy of this letter follows:

February 21, 1962.

Honorable John A. Mitchener, Edenton, North Carolina.

Dear Mayor Mitchener:

I am sorry I missed you on my last trip to Edenton; however, I guess everything is going along as well as can be expected. We have all the equipment lined up for the operations.

I understand from our representative, Mr. Thomas M. Robbins, that he and Mr. Hines got together on the electrical service the Town is furnishing for the operations. It seems from Mr. Robbins' report there is to be more than one voltage involved; however, I do not believe this presents any problem. Our requirements for electricity are at:

- 1. Hangar Area 2. Water Pumping Area 3. Power House Area

It being understood that each will operate on a separate meter for each area.

HANGAR AREA: Naturally, the hangar area will be the largest point of power consumption; the voltage transformers to be 440 volts and placed on the existing poles on the South side of the hangar. As previously explained to you, our electrical requirements will be about 800 h.p. within one year with a constant load of approximately 1500 h.p. I further understand there is some equipment in the hangar that it will be necessary to run 220 volts and also the lights will require 110 volts. I understand from Mr. Robbins this will not present any problem.

WATER PUMPING STATION & RESERVOIR: Naturally, this is the most strategic point for electricity as soon as possible, so in order for us to get the wells and pumps operating, it is my understanding the pumps are 220 volts. That will not present any problem.

POWER HOUSE OR BOILER ROOM AREA: It seems we have a different set of circumstances here in the fact this equipment is all 2300 volts, but as I understand it from Mr. Robbins, the transformers are at the power house, and the only thing that will be necessary is for the Town to connect the transformers.

I further understand that after looking the situation over as to the electrical requirements, they basically agreed the most economical way was to possibly set the poles along Guadaluca Road and branch off down Midway Road to transformer back at the hangar, and from the same road pump branch off to the water pumping station and extend the lines down Midway Road south to the power house.

There are one or two points on which we would appreciate your assistance:

- 1. Rush the boys along as fast as possible to get the electricity there as soon as possible, for we are anxious to go, and it is hard to do anything much without water and electricity. 2. Have Mr. Hines use his best judgment in the installation of this equipment to take care of the immediate requirements and foreseeable requirements. Keeping in mind the most economical way that the work can be performed by the Town to provide the United States Lumber Company with a standby charge.

There is a good possibility of us working together so the sales of the electricity on the base area will practically equal the sales in the Town.

Very truly yours, L. L. Lester, Jr.

LLLjr/vam

Supt. R. N. Hines was authorized to proceed with installation of the overhead power service required for services to be furnished east of the main runway and down to the cold storage building.

On motion by Jesse L. Harrell, seconded by Ralph E. Parrish and carried, \$50,000 certificate of deposit which expired today is to be renewed for a period of 6 months at 3% interest rate.

There being no further business the meeting was adjourned. RALPH E. PARRISH, Secretary.
