

Home Economics Extension News

By Mrs. Onnie S. Charlton, Home Economics Extension Agent

Community 4-H Subject Matter leaders in crafts and clothing are asked to meet at the St. John Community Center Tuesday, March 9 at 9:00 A. M., for a workshop on making articles from broomcorn. Miss Pauline Calloway, Home Economics Extension Agent, will conduct the workshop.

and household possessions recently by fire.

Safeguard Your Home and Farm from Fire

Take time now to remove fire hazards. USDA in cooperation with National Fire Protection Association, give the following information:

Farm fires don't have to happen. Ninety-five per cent of all fires are due to carelessness or neglect.

One tiny spark can mean you are out of business. So the best time to fight a fire is before it starts.

Faulty or misused heating and cooking equipment start more fires in farm homes than any other single cause. Other major causes are defective chimneys, chimney sparks, defective elec-

trical equipment, over-loaded wiring, matches and careless smoking.

Care in using gasoline and kerosene could cut destructive farm fires as much as 20 per cent. The safest method of storing gasoline is in an underground tank. Above ground, gasoline and kerosene containers should be located at least 40 feet from buildings. Keep containers in sound, leak-free condition. Store small amounts in metal safety cans well away from heat outside the house. Label all containers plainly so there is no danger of a mix-up.

When handling flammable liquids, keep away from flame and heat and enforce a no smoking rule. Do all refueling outdoors where dangerous vapors cannot accumulate. Wipe up all spilled gasoline before starting a motor. Never use flammable liquids like gasoline or kerosene for cleaning clothes or starting fires.

To keep down both fire hazards and fuel bills, all furnaces and heaters need periodic cleaning and check-ups. Be sure furnaces, room heaters, stoves and smokepipes are kept in condition and far enough away from combustible walls and ceilings. Have your chimney cleaned and checked regularly.

Never fill portable oil heaters while they are burning or still hot. Avoid overfilling. If coal oil is used, watch for possible burner flooding and flare-up.

Keep portable heaters away from areas where they might block escape. Keep them away from curtains, clothes racks and other burnables. Place a screen in front of the fireplace whenever it is in use.

Use the proper size fuse for each socket in the fuse box. Use a new fuse after each blow—never substitute a penny. Don't overload circuits.

Keep rubbish cleaned out of the attic, basement, closets, garage and yard. A clean house or barn seldom burns. Burn trash outdoors only on still, damp days. Don't put wet hay in barns. Keep roof and walls of your barn repaired to prevent leaks.

Keep combustible materials such as hay off of floors and out of areas where motor vehicles are used or stored.

They who wait, No gifts from change have conquered fate. —Arnold.

John Holmes High School Acelets Are Runner-Up In 2-A Tournament

By NORFLEET PRUDEN

The Acelets of John A. Holmes High School held high the school's name in the Albemarle Conference Tournament at Ahoskie, marching all the way to the finals, defeating Scotland Neck and Northampton, and then losing a thriller to Bertie on Saturday night.

The Acelets began their tournament play on Tuesday night against Scotland Neck after the Edenton boys had been upset by the Scotland Neck boys the night before. The girls were determined to make at least one entry a winner and made it look easy, stomping Scotland Neck, 40-30.

The Scots jumped to an 8-3 lead in the first period, but 17 Acelet points in the third quarter, 15 by Miriam Willis, gave

the Edenton girls a 20-12 lead, which they held to a 40-30 finish.

All-conference forward Willis got only two more points besides her 15 in the second period, but her 17 paced the team. Brenda Stallings pumped in nine, Ann Castellote hit for seven, Arlene Fry rang up three, Loretta Parks clicked for three free throws, and guards Becky Williford and Helen Rogerson added 1 each.

The win against Scotland Neck sent the Acelets into the semifinals against Northampton on Friday night.

The Acelets were 1-1 against Northampton during the season, both games going into overtime. There was no need for an overtime this time, for the Acelets went ahead to stay. The final

score was 31-27 as Willis again led the winners with 17 points. Fry scored six, Castellote four, Stallings three and Rogerson one.

The whole season boiled down to one game on Saturday night, as the Edenton girls met Bertie in the tournament finals before a standing-room-only (and not much of that) crowd in the Ahoskie gym.

The Acelets were also 1-1 against Bertie.

Bertie had a night off on Friday, for they played Thursday night; the Acelets, however, got no such chance for rest, as they had beaten Northampton the night before.

Bertie jumped to a 9-6 lead in the first period and were ahead 17-12 by halftime. The Acelets came back with renewed vitality and started cutting the lead.

Brenda Stallings pumped in six points in the third-period spurt, and the Acelets took a 22-21 lead until Bertie sank a two-pointer just before the buzzer to regain the lead. Bertie came back to hold the Acelets to five in the last period, getting 11 themselves for a 34-27 victory.

Stallings led the Acelets with 13 points. Willis, Linda Hollowell and Fry scored seven, four and eight points, respectively.

Although they were only No. 2 according to the tournament standings, the Acelets found consolation in a well-played game and a well-played season.

RUNNERS-UP IN TOURNNEY.—The Acelets of John A. Holmes High School closed out the 1964-65 season with a second place finish in the 2-A Albemarle Conference tournament at Ahoskie Saturday night. Squad members are: Front row, left to right, Patricia Alexander, Brenda Stallings, Miriam Willis, Arlene Fry, Sanfra Ange, and Loretta Parks. Second row, Ann Castellote, Helen Rogerson, Helen Jernigan, Coach Sally Lytch, Becky Williford, Judy Goodwin, Anna Perry, Brenda Cuthrell and Ann Harrell.

The machine that lifts itself!
POWELL'S NEW HYDRAULIC TRAILER TRANSPLANTER

Can be used with fertilizer equipment for once over, accurate operation

"42 H2"

Now you can transplant more accurately, reduce labor, and get increased returns per acre. This new "42" transplanter is equipped for use with a hydraulic cylinder operating through the tractor hydraulic system. You don't have to lift the planter out of the ground by hand. Model shown is designed for larger farms desiring 2-row operation.

Transport wheels are located between transplanting units and tractor for more even operation, better weight balance, easy maneuverability and maximum clearance in transport over uneven land. Uses popular "42" basic transplanting units with exclusive Plant Tray and Accurate High Capacity Water System.

Adjustable wheels allow planting on flat land or beds up to 8" high. Plant and water spacings from 12" to 40" apart, row spacings from 34" to 55". Fertilizer equipment available for once-over transplanting.

Also available in one- and two-row models, with or without fertilizer equipment, full line of accessories. Come in and let us show you the transplanter best suited to your needs.
