WHY A BRIDGE?

Is it really necessary to replace adult's missing teeth with a fixed bridge or partial denture? The answer is a definite YES! The reasons are quite simple.

When a tooth is lost, the adjacent teeth and the tooth (above or below) which acts as a biting partner, lose the support, strength and stabilizing influence which the lost tooth once provided. The remaining teeth will be subject to many problems such as drifting, abnormally exposed decay-prone areas and, worst of all, periodontal disease. (The single largest cause of tooth loss in adults).

The loss of just one tooth, if not replaced by a fixed bridge or partial denture, will more than likely, ultimately cause the loss of more and more teeth. In many patients, it is only a matter of time until the destruction is complete.

The dental arch was designed by nature to have a complete set of teeth - one helping and protecting the other. Replacing missing teeth with a dental appliance will maintain this design as well as your smile and ability to eat properly.
