NORTH CAROLINA WILDLIFE RESOURCES COMMISSION
NOTICE OF PUBLIC HEARING
In accordance with Sections 143B-18 and 150A-12 of the General Statutes of North Carolina, notice is hereby given that the North Carolina Wildlife Resources Commission will conduct a public hearing at 7:30 P.M. on March 1, 1982, in the Super Court Room, Washington County, Courthouse, Plymouth, North Carolina, for the purpose of soliciting public reaction

to the following proposal:
To amend Rule 15 NCAC 10B .0115 so as to add Washington County, or a part thereof, to the list of counties in which the intentional shining of lights on deer is prohibited between 11:00 P.M. and one-half hour before sunrise in areas frequented by deer and which are subject to substantial night deer hunting or in which residents have been greatly inconvenienced by such shining of lights.

The said amendment is proposed under authority of Section 291.1 of Chapter 113 of the General Statutes of North Carolina, to become effective May 1, 1982.

Interested persons may present their views either orally or in writing at the hearing, or prior to March 8, 1982, by communicating with the North Carolina Wildlife Resources Commission, Archdale Building, 512 North Salisbury Street, Raleigh, North Carolina 27611.

This 1st day of February, 1982.
W. Vernon Beville,
Executive Director
N.C. Wildlife
Resources Commission

No. 2 no sales reported. Southwestern Section — Trading was moderate. Demand was moderate. The number of sales on runner type increased with a fair amount of volume traded. Sales and buying interest was somewhat limited on the Spanish type. Prices are cents per pound for prompt shipment unless otherwise stated. Spanish type shelled jumbo 57-60 mostly 58-59; No. 1 55-56, occasional sale 57; U.S. splits 47-48; 14-16 size 25; runner type shelled jumbo 47-47½, medium 42-42½ occasional 43, February - April delivery 43; No. 1 occasional sale through May or June delivery 40; U.S. splits 42-42½, February - April or May delivery 43; 14-16 size no sales reported unshelled Valencia's hand-picked 43-44.

70 million tons of sucrose are produced each year.

Commission Begins Banding Procedure

The North Carolina Wildlife Resources Commission started its annual efforts to band ducks and geese this past week. Much of this work will be conducted in the Northeastern section of the state. The Currituck and Albemarle Sound areas will contribute to most of the banding sites.

Banding involves capturing waterfowl with live traps and cannon nets. The sex and age of each bird is then determined and a small numbered aluminum leg band is fastened around the leg. The bird is then released unharmed.

If a person finds any waterfowl that has been banded, they should report the numbers to the United States Fish and Wildlife Service in Washington, D.C. The information of all banded waterfowl is maintained in a central computer for use in wildlife research and management.

"Banding has been and continues to be an essential tool in the management and protection of migratory birds", states Dennis Luszc of Edenton, a North Carolina Wildlife Resources Commission biologist and waterfowl project leader for North Carolina. "We would know very little about the movements and population gains or losses if these techniques were not available."

This year emphasis will be placed on the banding of Canada geese and Canvasback ducks. The population of Canada geese in North Carolina has declined drastically during the past twenty years from 250,000 to less than 50,000 birds with the most rapid declines occurring just since 1976. At this same time the total goose population in the Eastern United States has increased significantly. Many of the Canada geese

are simply wintering further North in response to changing farming practices both in North Carolina and in Northern states. Commission biologist, however, believe that the effect of recent changes in hunting seasons in several Northern states may be contributing to the problem and may be responsible for the steeper decline in North Carolina the last few years. Only through intensive banding can this theory be proved and the problem be corrected.

"Banding activities have not been shown to significantly disturb waterfowl in an area", states Luszc, "in fact we often catch many birds in cannon nets at the same site where they were banded only days before".

The average guitar string has a playing life of 40 hours.

Vegetable Growers Meet

Continued From Page 7-A

some other varieties, such as Madera were nearly killed. Mirage showed up best for leaf disease resistance.

The Pippin test was on typical sandy watermelon soil. The three varieties with the highest yield in the Pippin test were Mirage - 45,900 lbs. per acre; Prince Charles - 44,350 lbs. per acre; and Dixie Lee - 43,400 lbs. per acre.

The Winbourne test was on strong soil. The top three yielders were Dixie Lee - 39,550 lbs.; Mirage - 37,300 lbs.; and Crimson Sweet - 33,600 lbs. Measurement on rind thickness showed that Dixie Lee has a rind thickness about 0.5 inches and Crimson Sweet 1.0 inches. This probably explains the reason why Crimson Sweet is a good shipper and Dixie Lee presents problems of cracking and bruising when shipping long distance.

We feel that we had two good watermelon trials in 1981. If you plant white watermelons, we think you might try Prince Charles on a limited scale. This variety has a fairly thick rind, and when Winbourne and Pippin are combined, Prince Charles out yielded Charleston Gray by 13 per cent. In last year's test Prince Charles again out yielded Charleston Gray by 13 per cent. Prince Charles has considerable more resistance to Fusarium wilt than Charleston Gray according to disease evaluation by the University of Maryland. Prince Charles is hybrid and seed cost some more than open pollinated varieties.

Mirage yielded the highest when Pippin and Winbourne test were combined. This is an excellent eating watermelon. We are not sure about its resistance to fusarium wilt.
