**Temporary Crowns**

If you'll be waiting for a crown to be fitted to your tooth, chances are you'll be given a temporary crown until the permanent one is ready. The "temporary" will have cosmetic value in maintaining the appearance of your mouth. It will also serve some important functions, such as maintaining proper space and relationships with adjacent and opposing teeth.

Often the temporary crown will be made of acrylic material of the shade to match your other teeth. But it is not intended to last very long, only until the permanent crown is in place to give the tooth long-lasting protection. Sometimes a temporary crown may be in place for several months. This can happen if other work has to be completed before the crown is put in place. If this is the case, a longer-lasting temporary crown will be made. This may be made of a heat-processed acrylic, which has a harder, more durable finish than the usual acrylic, or of some other wear-resistant material.
