DEWAR WOULD STAMP OUT THE BEAN BEETLE

(Continued from page 1)

we should have the bean beetle under control.

Do you know that in addition to bush beans, that the Mexican bean beetle destroys navy beans, lima beans, pole beans, cornfield beans, cow peas, soy beans, sweet clover and alfalfa? Do you realize that many thousands of families throughout the mountains depend upon beans as their main vegetable? We must wake up and close ranks and start in this week to wipe out the pest.

Any communities in the western section wishing to cooperate in this bean bug fight can secure any information or aid that I may be able to give such as formulas, general information, Cal. material as actual jobbers and powder guns. If you desire, I will take the time to come to your communities upon three or four days notice.

If you are out of bean seed now, please see the enclosed list of wholesale seed stores both as to bush and field beans. Dr. W. E. Hinds, state entomologist of Alabama, with headquarters at Auburn, Ala., has made thorough investigations and has issued through the Alabama State Department a booklet on the bean beetle. Mr. Crawford, at Bryson City, has been making experiments, and can help you.

If we will all pull together from now until frost we will have made sufficient headway so that when next spring opens every farmer in Western North Carolina will have learned the best method of killing the bean beetle and ridding our country of the most destructive pest that has ever come into our mountain country.
