NO matter how hot the day, how heavy the bearing pressure or how tight the clearance between moving parts, put the right consistency of Polarine into your motor and it absolutely does the work—holds its body and maintains a firm, elastic oil cushion that keeps the metal surfaces safely apart. Three consistencies of Polarine, all of the same outstanding quality, take care of differences in motor design. Pick the right one from the Polarine chart and you can depend on its high-class work.

Polarine flows quickly—low temperatures or high—spreads evenly over wearing surfaces—outwears inferior oils, yet is reasonably priced by the gallon and costs much less by the mile. Years of experience the world over have taught us to combine easy flow, positive work, long wear and low mileage cost and give you Polarine for absolute lubricating satisfaction.

The Polarine Chart

specifies the consistency of Polarine that correctly combines flow, work, wear and low mileage cost for your particular motor. Consult at your dealer's.

The Doctor Was Right

When the good old family doctor was asked about baking powders, he said:

"Use Royal. It is made from Cream of Tartar and is absolutely pure. You could dissolve a couple of teaspoons of Royal in water and drink it with benefit. That's a health test mighty few baking powders can meet."

The doctor was right.
