

New Truck Announced By Chevrolet Company

The Chevrolet Motor Company, whose unprecedented sales and production record of placing on the road 750,000 "Bigger and Better" models since January 1, established a new mark for the sale of a new model, announces this week the edict to its line of a new utility truck. The new truck, which embodies several improvements, chief of them a four speeds forward transmission, four wheel brakes and channel steel bumper, went into production in the various Chevrolet plants July 2. It will be on view this week in dealers' showrooms throughout the country.

The four speeds forward transmission will insure a more efficient application of engine power. The extra low speed gear provides maximum pulling power on heavy roads and steep grades while normal driving requirements are met as usual with second, third and fourth speeds. A power take-off port, to which various power devices can be applied, is a further feature of the transmission.

The four-wheel brakes are non-locking and supply a total of 317 square inches of braking, aside from an entirely separate and independently operated set of emergency brakes on the rear wheels. The front wheel brakes are of the internal expanding type, the rear wheel service brakes of the external contracting type, insuring quick and positive stops regardless of grade or speed.

A new low loading height, 41 inches from the ground, is made possible by a special "kick-up" feature of the long chassis. An unusually long frame support, extending behind the center of the rear axle, assures proper load distribution.

Rigorous and exacting tests, covering thousands of miles over all types of roads and under winter and summer climatic conditions, were applied to the new truck at General Motors Proving Ground before the Chevrolet engineering division approved of it for production.
