Soybean wool, used in making plastic fiber panels and upholstery padding in automobiles, may increase the demand for soybeans, a crop of growing importance in the South.

**Farmers Who Buy Milk, Pork, Poultry Called "Liabilities"**

"A farmer who is forced to spend money for milk, pork, poultry and other products he could produce at home is a liability in the National Defense program," says Dean I. O. Schaub, director of the N. C. State College Extension Service. "Every ounce of dairy, poultry and other such products is needed to feed defense forces in Army camps and industrial centers, and our friends who are resisting aggression in Europe," he declared.

Dean Schaub pointed out that the Farm Census showed that, in 1939, there were no cows on 98,204 of North Carolina's 280,000 farms; no hogs on 86,604 farms; and no chickens on 33,154 farms.

"That means," he asserted, "that about one-third of our farmers were buying milk and hog meat, and about one-sixth were buying eggs, or else they were doing without these essential health foods. Either situation is bad.

"For instance, if they were buying canned milk they were reducing the supply available for export to Great Britain. If they and their children were doing without milk, they were undernourished and no nation achieves total strength unless all of its citizens are well fed."

The Extension director says that North Carolina can make its biggest contribution to the "Food for Freedom" campaign by seeing that every farm has at least one cow, some pigs, and a farm flock of poultry.

"If we do that, we will more than meet our goals of increased production sought in 1942. The average cow in North Carolina produces 3,900 pounds of milk annually. If each of the farms without a cow in 1939 had only one in 1942, the State's milk production would be increased about 383 million pounds. We are only asked to increase our milk production in 1942 about 81 million pounds.

**Loans On Soybeans Announced By AAA; Available At Once**

A loan program for soybeans, the first ever offered under the Commodity Credit program and designed to aid orderly marketing of the 1941 crop, has just been announced by the U. S. Department of Agriculture. Soybean production has been stimulated greatly by defense demands.

Although the crop is concentrated in the eastern part of the State, some soybeans are grown in practically every county.

Loans will be made through the Commodity Credit Corporation and will be administered by county committees of the AAA, in a manner similar to that now used in connection with loan programs in effect for wheat, corn and other grain. Grades to serve as basis for determining the loan rate will be established according to the official grain standards of the United States for soybeans.

Loans at the rate of \$1.05 per bushel for No. 2 or better soybeans of all classes, stored on farms, will enable farmers to retain their crop for marketing at a later time.

All notes on loans will mature on demand, or June 30, 1942, but loans on farm-stored soybeans may be extended for one year. Loan values for the beans stored in approved warehouses will be at 7 cents per bushel less than for farm-stored beans. This difference represents the estimated average of storage charges the Commodity Credit Corporation would be required to pay to the warehouseman should the producer fail to pay his note.

Loans for farm-stored soybeans will be on a note and chattel mortgage basis, and warehouse loans will be on a note and loan agreement basis with warehouse receipts as collateral.
