Constable, Murphy Township

Short Sport Splints

With the bowl games coming up this week, it is time that we made our prognostications. Duke will either win by a large margin or lose a close contest. Missouri holds the edge in the Sugar Bowl while Alabama should take A & M at Dallas. Tulsa is too weak for Texas Tech and the East should win handily Saturday at New Orleans.

At the half way mark the Murphy bowling leagues released the following standings and averages:

CITY LEAGUE

Dickey Feed Store	31	14
The Man Shop	30	15
Coca Cola	21	24
All-Stars	18	27
Lions	18	27
Chamber of Commerce	17	28

HIGH SCHOOL BOYS

Citizen-Times	14	10
Blue Boys	13	11
Wonder Boys	13	11
All-Stars	8	16

LADIES' LEAGUE

Blanche's Beauty Shoppe	30	6
Duchess Beauty Shoppe	22	14
Teachers	11	25
All-Stars	8	28

HIGH SCHOOL GIRLS

Blue Devils	12	3
Yellow Jackets	9	6
Tar Heels	6	9
Volettes	3	12

AVERAGES

Men's Teams		
Dickey Feed Store	45	689
Man Shop	45	687
Coca Cola	45	677
Chamber of Commerce	45	655
All-Stars	45	649
Lions	45	647

Women's Teams

Blanche's	36	617
Duchess	36	577
All-Stars	36	570
Teachers	36	551

INDIVIDUAL AVERAGES

Davis	43	143
Schuyler	41	134
Crawford	29	139
Ramsey	44	143
Gentry	33	139
Lovingood	16	139
Stubbs	21	119
Mitchell	40	142
Akin	32	137
Leatherwood	43	142
Madison	42	144
Davidson	18	125
Adams	19	129

Tips On Saving Coal Given Household By Federal Expert

Home owners can effect substantial savings in fuel costs by following a few simple rules in the operation of coal burning furnaces, says Miss Harriet Elliott, head of the O. P. M. consumer division.

Householders are declared to be notorious coal-wasters. Wastage amounts in extreme cases to one ton out of every three.

For instance, many misguided shovelers cover their burning coal completely when adding new fuel. They shouldn't. Coal should be added this way:

1. Set dampers so that coal is burning brightly.

2. Add new fuel in one section of the firebed.

3. Leave a "bright spot" of glowing coals exposed on the surface to ignite gases given off by the new fuel.

4. Leave the exposed "bright spot" at the left, right, front or back of the firebox on successive firings to keep the top of the firebed reasonably level.

If the firebox isn't big enough to add sufficient coal in this manner, burning coal may be piled up on the sides of the firebox and new coal added in the crater. Take care to disturb the firebed as little as possible.

Another great American furnace

E. C. MOORE

room superstition is that a little coal in the firebox goes a longer way than a lot of coal. It doesn't. By keeping a five-inch thick fuel bed, and by bringing the level of coal right up to the firing door, house-holders will save the most fuel, providing they use the dampers properly.
