The 27,000-ton carrier will complete her third tour of duty in the Korean area when she docks in San Diego, Calif., July 3. Two years ago, on that same day, the Valley Forge launched the first Navy air attacks against North Korea.

In the past two years, the car-

## Why do they last so long?

—because 1/2- to 2-ton trucks built by GMC have all these heavy-duty features—features most other manufacturers reserve "for big trucks only!"

### Compare GMC point by point with any other truck!

Full-pressure lubrication protects all main bearings—force-feeds even to the piston pins!  
Airplane-type main & rod bearings stand up under heavy pressures and high speeds—last longer!  
Deep, rigid frame construction—just like the big GMC's—backbones the rugged, truck-built chassis!  
"Shockproof," four-point cab suspension—same as heavy-duty

GMC's—prolongs the truck's life and protects the driver!  
Recirculating ball-bearing steering mechanism assures "passenger car" ease in handling!  
Long, "pillow-action" springs smooth the going, cushion the load!  
"Luxury-type" seat cushions have individually wrapped coil springs like the big GMC road-liners—contribute to driver comfort and efficiency!

Get a real truck!

All-truck construction throughout!
