CHEROKEE COUNTY FARM NEWS

By PAUL NAVE
County Agent

By JAMES ADAMS
Assistant County Agent

A total of 570,000 pine seedlings were furnished by the Tennessee Valley Authority for Cherokee County. These seedlings were planted by 109 land owners.

There was 50,000 white pines; 212,000 shortleaf and 308,000 loblolly. This is a lot of trees for one county to plant in one year, but there are many more acres of land that could be planted to trees.

The County Agent's office will have information and application blanks for pine seedlings available sometime after the first of July.

There is a possibility that there will not be any free trees next year from the TVA. They may all be assigned to the State Nursery and have to be ordered through them. We will know after July 1, and will be glad to have all persons interested in obtaining seedlings to come by the office.

Should alfalfa be seeded alone or with orchard grass?

Factors favoring mixtures: A mixture is more flexible - has more uses. There is a better chance for a successful stand. Orchard grass will usually grow in areas of the field where the alfalfa fails because of soil conditions. Grass makes curing easier.

If you are seeding your first alfalfa, it is usually best for you to use a mixture. Since alfalfa is one of the most exacting crops as to soil, lime, plant food, and other needs you may fail to get a satisfactory stand when these needs are not met. The use of orchard

grass with alfalfa will help insure a satisfactory stand of hay mixture in many cases where the stand of alfalfa alone will be unsatisfactory.
