

Martha Hyer and Richard Burton in a dramatic scene "Ice Palace," Warner Bros, fimization of Edna Ferber's dynamic novel of the taming of Alaska and the exciting coming-of-age of this last great frontier as the 49th state. Robert Ryan, Carolyn Jones, and Jim Backus also star in the Technicolor film coming Sunday, Jan. 22, to the Henn Theatre.

Prosperity Marked Eve Of South's Secession 100 Years Ago

When South Carolina triggered the secession of Southern States a century ago, the Nation was in a period of

progress and prosperity.
Politically, the months were violent preceding South Car-olina's withdrawal from the Union on December 20, 1860. The North and South had split into two armed camps, with opinion hardened on the issues of slavery and secession.

But the prewar period also was a time of technical innovation. Home Lighting Demonstrated

revolutionary marvel, home electric lighting, had been successfully demonstrated. A New York hotel, to the consternation of many guests, had installed the first passen ger elevator. The New York and Erie Railroad had put into service sleeping cars. Winchester had produced his first repeating rifle. During the summer of 1860,

the Great Eastern, then the biggest ship afloat, made its maiden voyage from England to New York. The Pony Express was braving Indians to ed mail to and from the West Coast.

The UnitedStates Congress enacted a bill to establish the Government Printing Office, which was to become the largest printing establishment in the world.

In the field of fashion, a new type of steel hoop light-ened the burden of women's floor-sweeping skirts. Men's haircuts cost about 12 cents.

South Carolina, with a non-slave population of 291,000, particularly was enjoying prosperity. Ships sailed from her ports with cargoes of rice, cotton, and indigo, re-turning with silver, furniture, silks, books, and other luxur-

South Carolina's Low Country was a mosaic of rich plantations in a romantic setting of majestic rivers, yellowgreen marshes, magnolias, cypress, and pine, of avenues of live oak bearded all

over with gray moss.

Plantation life, with its chivalric tournaments, deer hunts, and horse races, barbecues, and stately balls, was gracious. But it was far from indolent.

Thousand Interests & Objects "It would be impossible," planter-novelist William Gilmore Simms to a Northern friend in 1857, "to give you any just idea of the thousand interests & objects demanding 'constant care, watch, thought, and variety of resource, which flow from the

charge of 70 negroes and the cultivation of 600 acres of land; these involving the use of 20 horses, half a score of wagons, as many of carts, a blacksmith shop, a carpenter's, cotton gin, screw threshing houses, and heaven ws what all besides,"

Many plantation families spent summers in Charlesthe State's oldest city, or Beaufort. They maintained handsome town houses of brick or wood, usually with spacious plazzas to catch the sea breeze.

Charleston impressed an Englishman, traveling in the South during the great plan-tation era, as one of America's first cities and "one in which the conveniences of luxury are most to be met with."

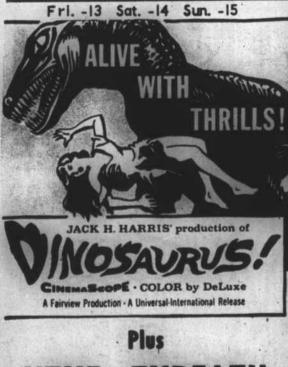

Not long before the winds war were to blow away peace and prosperity, the young mistress of Belvedere plantation confided, in a letter to a friend, "We intended going to Charleston next week but I feel rather doubtful about it . . . I would be sorry to give up the trip for the b has engaged rooms for us at the Charleston Hotel, I could not go at a better time for the beau-pere will have his carriage and horses and servants

Mrs. Stratton gave the devotional and the program assist-ed by Mrs. Harold Walsh, Topic of the program was "Christian Heritage." Eight members were present and one visitor, Mrs. Lewis Collins,

Traffic Situation -**Great Unsolved** Social Problem

Paul Jones isn't a preacher, but he preached a sermon recently.

He wondered what things will

be like out on the nation's highways in another ten years, Will there be room to park your car, much less to drive it? How fast and how far will you drive? And what about the traffic toll?

Mr. Jones had some pretty good answers since he is the recently retired chief of public information for the National Safety Council.

He visualized a swarm of 100 million cars, trucks, buses, and what-not thronging the highways in 1970 - half agair as many as are out there now, They will ve driven a tril-

lion miles a year by 120 mil-

lion drivers. Placed end to end, they would form a soild line of traffic 385,400 miles long -15 times the distance around the world and equivalent to a traffic jam along US 66, for example, of 190 cars abreast every foot of the way from Chicago to Los Angeles.

Mr. Jones' sermon contin-"And what Is the price in human life and cold cash that we may have to pay for

Well, unless we do better in the next 10 years than we are doing now, there will be a traffic toll in 1970 of 55,000 deaths and two million injur-ies. And the cost will be about

nine billion dollars! "It is obvious, therefore, that the traffic situation is of the great unsolved social problems of our times.

miles between lubrications

30,000 is the most famous number of the year. It's every '61 Ford owner's license to save. How can Ford do it? Conventional chassis lubrication fittings have been replaced with metal plugs that help protect each lubrication point against abrasive mud, dirt and dust. And then, for only about \$4 and about 20 minutes your Ford is ready for another 30,000! This is just one of the many ways the '61 Ford is built to take care of itself. Your Ford Dealer can show you more.

sees sween Jing & citingtony,

HERE'S HOW THE '61 FORD TAKES CARE OF ITSELF

Lubricates itself—You'll normally go 30,000 miles between chassis lubrications (which cost only about \$4,00 and take about 20 minutes) because Ford has replaced conventional grease fittings with a scaled-in Inbrication system.

Cleans its own oil—You'll go 4,000 miles between oil changes because Ford's Full-Flow oil filter gives you filtration through libers... trapping more dirt than any other type of filter made.

Adjusts its own brakes-New Truck Size brakes

Guards its own muffler—Ford mufflers are double-wrapped and aluminized to last three times as long as ordinary mufflers.

Protects its own body—All vital underbody parts are specially processed to resist rust and corrosion, even to galvanizing the body panels beneath the doors.

Takes care of its own finish—Just wash and clean Ford's new Diamond Lustre Finish and it continues to glisten like new. It never needs waxing.

Only FORD is beautifully built to take care of its
