Strangers On A Bus

By GEORGE B. RUSS

Harold Harden awoke early this particular Sunday morning with a poignant realization that life was passing him by. Unfulfilled, that, he was missing too much of the good things life was offering up for those ready and able to get aboard the fun wagon.

Madge was asleep when he crawled out of bed. Harold was sure his wife was sleeping; her breathing was deep and relaxed and noisy. He had never given this discovery away; he let Madge go on thinking she did not snore in her sleep. Yep, his little wife was one of the finest; there was no doubt in his mind on that fact. Perhaps, she was too fine; Madge called it an evening of fun when they went to a church social and sat around eating a lot of food and laughing too much. A man of 45 should be contented, maybe, going to church parties, club meetings, school plays with his family. And until quite recently he had performed like a bear. After being carefully reminded of what he was supposed to do, he went along with the program. There is an enjoyment of sorts to be derived from "church parties," however, he itched now for a change in the area of "getting fun out of life."

Where to begin was the bone of contention in his throbbing brain. Where did a 45 year old Casanova begin after about twenty years away from the sport of philandering? Why he had gone into mothballs was a slight puzzle to him. Being good for the sake of being able to say he was a faithful loving, "never cut out on the ole miss" had not dawned upon him. In all probability, the boys had taken the wind out of his sails. He had spent a great deal of time with Thomas Allan, Oliver and Ronald—his three sons had been loads of fun; they had demanded much of his time and he had given unstintingly. Boys need their daddy and he made him-

self available. Between the boys, Madge and his business, there has been no time for outside interests.

Harden Enterprises had been a full time job during the early years of marriage -- and, their five year plan had failed woefully. Thomas Allan was born two years following Madge and his planning session. Madge was a wonderful wife, mother and homemaker; she laughed about their slip up, however, she would have been much happier if their 5 year plan had been a success. He had worked much harder to produce matrimonial bliss on all fronts -- security foremost. In a small measure, he had succeeded. Madge was happy in a restive manner. Seemingly, she kept busy to avoid thoughts of how indigent the Hardens really were. He had been grateful for her silence; he worked even harder to provide for his family.

Harden Enterprises advanced at a snail's pace. Small, Negro businesses just weren't geared to the usefulness of an advertising firm designed especially for the struggling new business. Friends who threw a little business toward Harden Enterprises expected a thousand dollars worth of service for as close to nothing as possible. And when, they were pressured into paying their indebtedness, they yelled about somebody wanting something for nothing.

Harden's services were par-excellent and the price was right, so small white businesses flooded Harden Enterprises with orders. By the time Company books began showing interspersions of blue, Oliver was born -- and, to add fury to the fire, Inez threatened to leave the organization. His sister was called the company's "easel man." Aside from doing most of drawings, she was executive vice president and nearly half of the organization's capital assets belonged to Inez Mildred Harden. From all indications Inez relished the idea of having

EXAMINE MODEL—Miss Audrey Lindgren, center, a nursing consultant with the U. S. Public Health Service, examines an anatomical model of North Carolina Central University's Department of Nursing during her recent visit to the department's curriculum project. Looking on are Mrs. Helen Miller, left, chairman of the department, and Mrs. Pat Conklin, director of the federally-sponsored curriculum project.

the company over a barrel; nevertheless, Madge persuaded her to stay on with the company awhile longer. Madge was a genuine gem when it came to handling people.

Harold had never really loved the tall, raw bony woman nor her iconoclastic attitude. She was a chain-smoker, spoke in a booming voice and used her fist to drive home a point. Inez was blessed with a brilliant mind and cursed with a wagging tongue. She knew a lot about too many things not pertinent to an advertising agency. Racism was her number one speciality. No matter how much nor how often he expounded the fact that Harden Enterprises would be a "lost ball in tall grass" if it weren't for his white patrons, she fumed; "then you must educate, point the way -- bleed a little." If she were seated at a table laden with dishes and platters of food, things were nearly shattered by the impact of the wham she gave the table with her fist.

Ray Harden, a cousin, and Samuel Kelly, Madge's brother, enjoyed the "red bone's" pot-pourri of platitudes and insults; "talk that talk, that's my dind-ah-talk."

Inez was known as the raising star in the Negro business world, however, she managed to produce not more than a three percent increase in black accounts. Most of the lady's time was spent scouring the black business section, teaching, pointing out the importance of black advertising to black businesses. In the meantime, he was forced to bridge the gap made by her absence. Besides, much of the work was relegated to Madge whose hands were busy with a baby and a small child, plus cooking, washing, ironing, cleaning, dusting and stretching the few dollars and cents he was able to salvage out of

Control Suggested For Ravenous Fall Webworm

By M. E. GARDNER
N. C. STATE UNIVERSITY

The fall webworm can cause extensive damage to many kinds of trees. The worms (caterpillars) live in colonies protected by a web attached to the tree branches. They can be easily spotted and should be eradicated before they defoliate large tree sections. Spray with Sevin or malathion. Mix the materials with water as directed on the container.

Some prefer to burn them out using a wad of cloth on the end of a pole saturated with kerosene oil. If you use this method, employ quick thrusts with the flame in order not to damage the foliage more than necessary.

Bearded iris may be lifted and divided anytime between mid-July and early September. If you have not lifted and divided the rhizomes in the last three years, the plants are probably becoming crowd-

ed and should receive attention.

Prepare soil well and add about one measuring cup of an 0-14-14 fertilizer to 10 square feet of bed space. Mix well into the first 6 inches of soil. When planting, cover the rhizomes with about one inch of soil. Keep free of weeds and watered. Earlier plantings become well established in the soil and bloom better the following spring.

Be on guard for lacebugs on azaleas, rhododendrons, pyracanthas and Washington hawthornes. Spray thoroughly with malathion being sure to cover the undersides of the leaves. These are sucking insects and cause the leaves to turn a dirty gray. The spray must strike the body of the

nymphs and adults to be effective.

Keep your roses protected from insects and diseases by spraying every two weeks with a combination insecticide and fungicide. Malathion and Captan are good if you mix your own, or, you can use one of the prepared combinations available from your garden supply store.

If you have not accomplished this chore, get with it. Remove all of the old fruiting canes from your red and black raspberries and burn them. This procedure will reduce disease infection. It is a good plan to protect the new growth with a combination insecticide and fungicide. Captan or Fermate for the diseases; and malathion for the insects. Apply spray every two weeks.

REAL & RICH & GOOD

THE CHANCE OF A LIFE-TIME AWAITS YOU!!

That chance is the opportunity for advancement in a job that offers good pay, excellent benefits and stable employment with one of the most dynamic industries in the world.

How can you take advantage of that opportunity?

Basically, all you need is an eagerness to learn and a potential for doing a good job. Electronics, communication or telephone experience is desirable, but not necessary. We will provide on the job training if you have the potential.

Two Pretty Sheet Patterns Custom-Decorate Bed, Bath

Transform a tiny bathroom by wrapping it in the same sheet patterns as those used in a bedroom. A gay floral pattern, "Meadow Flower" accented with "Boutique Stripe", Fortrel and cotton durable press sheets by Bibb, works wonders without costly structural changes. Sheets are cut to fit wall and ceiling then attached with two-way tape. The shower curtain is made from a single size sheet hung on plastic rings. Grommet kits to make the eyelets in the curtain are available in hardware stores. The matching window shade is a do-it-yourself Lam-Eze kit requiring only handpressing to laminate fabric to the shade. For added luxury, wall-to-wall Fortrel and nylon carpet, a machine washable-dryable bath kit by McAuley can be cut with regular, but sharp, household scissors. For a whimsical touch, a Victorian double skirted washbasin neatly conceals cleaning equipment. Skirts are attached with self-adhering tape.

Regulating, colorful floral bouquet pattern on durable press sheets bloom year round in bathroom.

Stripes make a crisp design statement in bedroom. Pink Fortrel shag carpet is a strong color accent.

In the bedroom, "Boutique Stripe" is the dominant pattern. Instead of regulation pillow cases, shams made with the stripe on the bias adds design interest. Solid color borders are the cut-off sheet hems. Left-over scraps may be used to back the bedside bookshelves and to cover the chair pad. The sheer washable Fortrel ready-made curtains, trimmed with braid on the shade, are as practical as they are pretty.
