ploying 1,000 to 1,200 people. Duke Plastic Surgery Resident Given An Award

0000000000000000000000 "Come Man, See God"

By DONALD LOVE By DUNALD LOVE

Man has, from the beginning, fought God by being disobedient. For reasons, man is interested in doing things his own way when he does not have a way. There are only two ways, right and wrong good and evil, God and the Devil. So man has to accept either God's way or the Devil's way. The decision is his to make, since he does not have a way.

Man was told, do not take that you can not give. Why take a life when you can not give life?

Cain, Adam's son, killed his brother Abel, then lied about it. God had a way of knowing just what was going on. After questioning Cain, God told Cain, his brother's blood was in tune with him. There was a communication between God and Abel's blood. The blood of Abel talked with God.

There have been many in stances God proved himself over and above Man, and Man had to turn to God for Mercy, for relief, and for deliverance. Joshua, needed more time

in a battle to win this battle. He asked God to prolong the time long enough to get this job done. God extended the time by causing the Sun to stand still. Joshua 10:12-14. David was being chased all over the country by King Saul. David went into a cave with his men to rest. As they slept, King Saul and his army came to the cave. There was no escape for David and his men, God had a spider to web a web over the mouth of the cave; proving again that he is God.

There are many more illustrations that could be used proving that God is the Master. These stories have been told to man from one generation to another and none of the generations let these miraculous acts of God disturb them enough to change their ways. In some of the battles.

Joshua had, going into Canaan

God killed more of the enemies with hair storms than Joshua's armies with swords and spears. It is time and past time for us to become educated with God and ignorant to the material world. When will we begin to see God? As much

proof as we have declaring God, we are so dumb rejecting Him. We seem to have material reasons to reject God. We now know where the wind comes from and what generates it, but we have not found what happens to it. We know what causes electrical storms but we

have not found which of the clouds are positive and which are negative. When these two clouds come together, they cause lightening.

Matthew 26: 14-16. Judas, then acted as we today. He figured how he could get a few extra dollars by selling Christ to his enemies. Jesus, seeminglv was not too well known by the ones who wanted his life. Judas, came up with a bright idea identifying Jesus from the other disciples. A kiss was the

key. The time for the kiss. Matthew 26:3-10. Matthew 27:3-10; Now Judas can and did see God. We too should see God long before some of us do.

The many mistakes made by others should cause our minds and eves to open and refrain from making the same mistakes.

Christ came to die for sinners. All are sinners, some of us are sinners saved by God's Grace. It is this group who can turn the world completely around by seeing God

for the sake of others.

BLACK AND BROADCASTING DISCUSSED (Left to right) Al Wiggins. Minority Affairs Reporter from CBS Television Company in Oklahoma City, tells Saint Augustine's College Students to go into the area of broadcating. The students are. Miss Annette Re d

a sophomore biology major from Goldsboro; Marshall Harvey, a senior sociology major from Enfield; and Miss Marilyn Green, a sophomore mathematics major from McClellansville, S. C.

Reforms **Discussions are Held** Penal

Women In Action For the Prevention of Violence and Its Causes (WIAPV) heard Lee Bounds, Commissioner of State Board of Corrections and Kenneth Harris, Project Coordinator of the State Corrections Dept. of Community Volunteer Program explain various facets of the penal reforms were already being effectuated at the prison centers before the Attica Uprising.

Bounds' discussion centered around the development of penal reforms in North Carolina and other penal systems in the nation. He reiterated that there is no way to really assess the full impact of the Attica Uprising this fall on any prison system in the country, but pritation. sons still face the question of

"how we can anticipate what is right and proper for change." Harris, a graduate of Hillside School and North Carolina Central University described the Community Volunteer Pro-

gram in detail. This is a program whereby Volunteers take selected prisoners outside prison walls and into homes, churches and recreational areas. These prisoners are usually those destined for re-

entry back into the community. He pointed out that prisoners come from all walks of life and of varying educational levels from Masters' Degrees on down. Thus, Volunteers of a variety of intellectual levels are needed to assist in these programs of rehabili-

Favorable statistics show only a small percentage of infractions from prison leaves by the prisoners. Since the communities will be involved in such programs, it is felt that the communities need to know and become closely aligned to the problems involved in penal reform programs of rehabilitation.

Bounds further emphasized that the N. C. penal system has been changing from "an institution, that punishes, puts down the dehumanizes," to a "help services institution, assisted by programs in mental health and treatment centers for physical diseases and disabilities as well as job training for future entry back into the communities."

It is hoped that many Volunteer groups will become involved in this much needed area of community services.

Pan Am Seeks **Stewardesses** From Minorities

The Mall will contain approximately 350,000 square feet of stores and about 40,000 square feet of mall area. Some 2,400 spaces will provide parking for all sides of the center. Future plans call for the

By JOHN MYERS

At a press conference at the University of North Carolina in Chapel Hillrecently Mrs. Bella S. Abzug, 19th district New York Congresswoman, spoke of women's roles in politics: "We are in a new age. The men only signs over the doors of politics are coming down. These achievements are not going to be given to women. They must work for them. Through working coalitions We must support 'the women caucuses through out the nation."

Mrs. Abzug further stated that women comprises 52% of the population and due to this, are in the position to change the power structure if they work at it.

When asked about President Nixon's Phase II policy she replied: "I am very pessimistic about it. I was very pessimistic about phase one and I was pessimistic about our eco-

Official Addresses Lon terene a HE

"If the environmental movement is a fad, it's certainly the last fad of the 20th century," said George E. Lowe, assistant director of the Division of Environmental Education of the U.S. Department of Health, Education, and Welfare.

Lowe addressed the annual ession of the North Carolina Resource-Use Education Conference Thursday at North Carolina Central University, He told his audience, largely

made up of high school students, their teachers, and school administrators, that environmental education is desperately needed today.

"A glance at your TV or newspapers, or a glance around you, will indicate that we are in an environmental crisis," Lowe said. "I don't think there is any question about it."

Lowe said mankind is in the situation of a miner whose canary has just died. "The birds are dying and they are trying to tell us something. You used to have brown peli-

cans off the coast of North

Carolina. You used to have the peregrine falcon which would fly through here. Many osprey would also fly through.

DDT, Lowe said, has made those birds almost extinct. The shells of their eggs, he said, have become "mushy," and when the birds sit on the eggs they crush them.

"Our environmental problems today basically stem from the high prosperity of the last 30 years," Lowe said. He said that with the decade of the 1970s an effort has been begun to reverse the destruction of the environment.

"Beginning in 1970, President Nixon opened a new decade - the decade of our environment. He said it is literally now or never." Lowe said the new emphasis on the environment has resulted in the creation of the Environmental Protection Agency and the Council on Environmental Quality, and in the passage of the Environmental Protection Act and the Environmental

Education Act.

"Environmental education. Lowe said, "implies a somewhat different education than that which you've been receiving. It's problem focused, it's multi-disciplinary ... It's community centered, it's student and teacher-centered. "We've got to get students

active working on these problems themselves," Lowe said. He said the environmental crisis was the concern of other agencies then the schools. 'Everybody has something to

contribute," Lowe said. Barry Goldwater, Senator (R-Ariz):

"For reasons of peace, not war, America must remain militarily strong no matter what it costs."

Robert F. Froehike, Secretary of the Army, on removing slot machines: "It is my intention that these machines will no longer tap soldiers' pockets."

An act of duty is law in practice. -Benjamin Whichcote.

Pan Am has committed itself to hire this number to join the ranks of the some 5,000 young ladies of many nationalities serving passengers aboard the airline's worldwide system. Alice and the recruiting team have been recruiting since September and have seen thousands of applicants. They have selected 50 from the thousands and are still looking for the other 50 who will start stewardess training at Pan Am's Training and Development Center in Miami early next year. The group tours colleges, Urban League, NAACP and Pan Am offices nationwide.

"Trying to get applicants from minority groups is a special problem," says Alice, who started flying for Pam Am about a year ago. "Girls with college backgrounds are prone to go into teaching and other professions and never give airline work real consideration as a career."

A summer job with Braniff while attending Fisk University introduced Alice to the airline industry. During that summer she traveled throughout the United States and learned a great deal about people.
