We launched a fund raising campaign among members, which resulted in raising \$2,700. We have received a grant of \$500 from the Mary Duke Biddle Foundation.

We come before you hoping that you will find it possible to match the City's contribution of \$2,000. If this is impossible, we, of course, would be appreciative of what ever you could do.

In testimony of the value of our services to the Community we received a Citation of the State Department of Public Instruction for (quote) "having performed a very worthy and most need service to the community of Durham, and especially the schools, We have had no effort in the State to have been pursued with the enthusiasm, dedication to purpose and positive goal rooted in foresight, which was and is characteristic of your organization" (end of quote).

Cognance has also been taken of our work by the President and Attorney General of the United States, Superintendent of Durham City Schools, the Mayor of Durham, the Durham Human Relations Commission, The Junior-League of Durham, and the Kiwanis Club of Tobaccoland.

We have also received two Freedoms Foundations Awards and a National Citation from the National Center for Voluntary Action.

Because of the apparent effectiveness of the women in-action activities in Durham, in comparison with the problems that still exist in other communities, two have already formed Women-In-Action Chapters in their communities.

Namely, Raleigh and Wilmington. Inquiries about the organization have also come from cities in other states and as far away as California.

We would, of course, not like to have to close our doors as a functioning organization because of lack of adequate support. This is why we have come to you today. Thank you so much.

Walktown

Students, faculty, and administrators from NCCU are coming to the aid of the center. Programs and fund raising activities are currently in the planning. Specific efforts of the NCCU Outreach Committee to assist the Walltown Community Center is about working to coordinate the human resources of NCCU for volunteers and fund raising to support this private center.

Specific efforts by the North Carolina Central-University Outreach Committee are beginning to mount on campus. Plays, talent-shows, and basketball tournaments are being planned to raise "new" walls for the center.

A current lack of financial support prevents the center from fulfilling its goal to serve the youth in the community.

As a highlight of the Outreach Committee's involvement is its first planned benefit. The Drama Department will present on March 1, 1973, a special production, "The Sty of the Blind Pig" proceeds to be used in the "new walls for Walltown Center." The special dramatic production will be held in at

Remember, contributions are tax deductible.

Care Center, located at her late husband's church, Mt. Vernon Baptist, became a model in providing care for children of working mothers and at the same time offering the children a head start toward academic

excellence.

Dr. Browne now lives in Rhode Island, where she grew up. She left Durham soon after she helped create what is today the city's most successful human relations agency, Women In Action for the Prevention of Violence and its causes.

She revisited NCCU as a consultant in the areas of special education and speech and hearing, programs she herself had founded.

High Blood

americans and the stresses of ghetto life—two factors missing from the life style of Africa.

"Blacks in the inner cities," he says, "eat a tremendous amount of food high in salt. Blacks in Africa don't have a high sodium level in their diets, and aren't subject to the same stresses as black Americans. And African blacks have no more hypertension than whites from the same areas."

Dr. Jeremiah Stamler, professor and chairman of the Department of Medicine at Northwestern University in Chicago, contends: "Hypertension is the most important disease of black Americans."

The late Dr. John B. Johnson, who at the time of his death last December was director of cardiovascular diseases at Howard University in Washington, D.C., agreed. The famed black cardiologist drew a sharp distinction between sickle cell anemia—an ethnic blood disease which affects

blacks almost exclusively—and hypertension: Only one in every 500 black Americans has sickle cell anemia. One hundred in every 500 black Americans has sickle cell anemia. One hundred in every 500 black Americans have high blood pressure.

He told an American Heart Association panel during the organization's 1972 annual meeting:

"Sickle cell disease is relatively unimportant in comparison to hypertension. Yet, it is recognized as a public health problem. Venereal disease is less epidemic among Americans black and white. VD, too, is considered a public health problem. Why not hypertension?"

During his long career, Dr. Johnson was a major spokesman in his speciality of cardiology, and throughout the medical and health professions. And before his death at age 60, Dr. Johnson saw evidence that his years of effort to have hypertension declared a public health problem, and to bring about a significant government effort to detect, treat and control this disease among thousands of hidden hypertensives, had borne fruit.

Last July, the Department of Health, Education and Welfare launched a program to set standards for treatment, to shape an educational program for both the public and the professions and to study the "impact of an expanded hypertension program on the health care delivery system, and to

provide) an assessment of the need for additional resources."

At the beginning of 1973, the HEW launched the initial phase of its program to seek out hidden hypertensives. This action, in a sense, stands as a paramount to Dr. Johnson's hope, and is today the hope of those who carry on his work at Howard University, that the HEW program will eventually provide new clues to the mystery of hypertension, and the mystery within the mystery of hypertension and black Americans.

fired in November, 1970 following Lenzner's charges that the Administration's move to regionalize the program was to "appease" local politicians.)

Noting that pink "slips" were given the 34-member National Advisory Committee—which had served, since the agency's beginning in 1965, to join members of bar association, poor persons receiving legal services, and the Government—Tetzlaff said, "I think he wants to declare open warfare on it, discredit certain parts of it and use it for political ends."

Economic indicators come in all sizes. One observer notes that the tree in the bank lobby now carries about 8.5 per cent tinsel.

TELL ME

TELL ME: ARE THERE ANY MOUNTAINS OF SOLID SALT? YES! KEF EL MELAH, A MOUNTAIN IN THE ALGERIAN SAHARA, 1 1/2 MILE IN CIRCUMFERENCE... IS ONE HUGE ROCK OF SOLID SALT!

TELL ME

TELL ME: HOW HIGH ARE THE KAIETUR FALLS OF BRITISH GUIANA? WITH A DROP OF 822 FEET, THESE FALLS ARE ABOUT 5 TIMES THE HEIGHT OF NIAGARA FALLS!

TELL ME

TELL ME: HOW DO WE GET CORK? CORK COMES FROM THE OUTER LAYER OF THE BARK OF AN EVER-GREEN OAK TREE THAT GROWS IN THE MEDITERRANEAN SEA AREA!

TELL ME...

TELL ME... CAN A MAN LIVE ON THE MOON? YES, IF HE WEARS A SPECIAL OXYGEN OR AIR TANK... SINCE THE MOON HAS NO AIR OR WATER!
