## Easy New Hair Styling

Grandmother knew the curling iron as a non-electric gadget she heated on the range to what she hoped was not too hot a temperature.

It's come a long way, baby! Now it is electric and the heat is controlled by a thermostat. It has mist to improve its performance, so Sunbeam named it the Mist Stick curler/styler. Here are some tips on how

The tightness of the curl is determined by how much hair you roll each time and how ong you hold it in the curler/ styler. As a rule, after heat-ing, about 30 seconds per section will give a firm, bouncy and long-lasting curl, but this can vary with hair types.

For tight curls, isolate a section of hair and comb it to smooth it out, Holding the section by the hair ends, clamp the Mist Stick curler/styler's rod around it at the roots. Slide the rod up the section to the the hair wraps around it, back down to about an inch from

the scalp.

Hold it for about 30 seconds, unclamp the rod and slide it out without unrolling the curl. Let the curl cool be-fore brushing. Remember, to get more cas-

ual styles use slightly thicker

sections of hair. The thicker the section, the looser the To mist-style a page boy,

isolate a thicker section of hair and comb it through. Holding it by the ends, clamp the rod on it at the roots and slide the rod slowly out to the ends. Hold it at the ends a few seconds before rolling.

about one turn and hold for about 30 seconds. Unwind, re-move the rod and let cool be-fore brushing gently into

shape. Complete how-te hair styling directions are packed with the Mist Stick curler/styler.
