In many beautiful streams, rivers, and lakes there may be excess amounts of heavy metals in the water. These heavy metals can be lead, cadmium or mercury which are known to be poisonous to humans. They can also be iron, manganese, copper, cobalt, or zinc which are metals needed in the body. Even these beneficial metals, however, are potentially harmful at high enough concentrations.

Any time a heavy-metal is in the water, it is absorbed by the organisms that live in the water. Fish absorb metals into their body either directly through the gills or by eating other aquatic organisms metal. The harmful concentrations are already known, however, for many metals and EPA has set water quality guidelines accordingly. Using these guidelines as standards, major bodies of water throughout the U.S. are monitored periodically at 110 stations by the U.S. Fish and Wildlife Agency. Individual states also monitor their lakes and streams and the data that is collected concerning the amount of heavy metals in the water are available to the public. The mining harmful effects of heavy metals. Scientists throughout the U.S. are working to determine exactly what concentration levels are harmful for each type of

despite postings fishermen continue to catch and eat fish from contaminated water. This poses a danger to those which have absorbed the metal. If the concentration of a metal in fish reaches a high enough level, it may be dangerous to eat the fish.

Fish can be used as indicators of heavy metal content of the water they live in since their bodies absorb metals. For this reason they are also being used as test animals in research on detergents who eat the fish because the metals in the fish are then

concentrated in the bodies of the people.  
 If you have a favorite fishing spot, it might be a good idea to check with the environmental monitoring agency in your state to find out if heavy metals are a potential hazard there.

**IN THE GENERAL COURT OF JUSTICE SUPERIOR COURT DIVISION**  
 FILE NO. 80 CVS 1979  
**NORTH CAROLINA DURHAM COUNTY, N.C.**
