topics such as the "how to's" of communicating the gospel as well as social action and financial management.

Workshops will include such areas as inner city missions, the black family, Christian education, and counseling.

Motivated by the belief that no Christian revival has ever had far-reaching implications in black America, Loritts and other "Chicago '81" organizers want to concentrate on practical ways in which conferees can effectively reach the world for Christ.

Conference organizers consider "Chicago '81" especially important for

giving conferees a personal vision of how God can use them as leaders, while they tap into a vast pool of resources as they meet with speakers and delegates at the five-day event.

Cost for "Chicago '81" is \$75 for singles, which includes lodging for four nights at the Chicago Marriott Hotel downtown, a \$20 non-refundable registration fee, conference materials, a special banquet and two concerts. For couples, the amount is \$130. Commuter cost is \$40.

Additional expenses include meals, ground

McNEILL

her desk first, but it is possible that this report by-passed her desk. District Attorney Dan K. Edwards, Jr., could not be reached for comment.

A Public Safety detective working on the case could not be reached for comment. A detective, who is not working on this case, said he does not believe there will be any motion by investigators until after the holidays.

Attorney George W. Miller, Jr., hired by the Alcoholic Board of Control to investigate the charges and to represent Allen, said Wednesday that he has not completed his investigation.

McNeill decided last Tuesday against obtaining a warrant against Officer Allen, after attempting for a second time. McNeill agreed to wait, upon advice of Public Safety detectives. Magistrates had denied McNeill a warrant because of the impending investigation. After a telephone conversation with magistrates, Judge J. Milton Read, Jr., cleared the way for McNeill to obtain a warrant. Read told a magistrate that warrants are denied not on the basis of an investigation, but because the evidence presented is insufficient.

Durham Branch, NAACP, is also investigating the brutality charges, but the local chapter is also awaiting the results of the Public Safety investigation before pursuing the matter further.

Dr. Prezell Robinson Returns

Mission Forging Linkages Between Africa and America

"Working to establish linkages between African and American colleges and universities is a ten-year long dream among black educators such as myself," asserts Dr. Prezell Robinson, president of Saint Augustine's College. This ten-year old dream may become reality next

week African trip. Dr. Robinson visited Nigeria, Botswana, Zambia and Zimbabwe. He talked with political and academic officials about developing linkages with African universities and historically black colleges. He also discussed the "possibility of a faculty-student exchange program, joint publication of scientific journals, and joint seminars and conferences."

In the summer of 1980, college presidents and representatives of about sixty American and African universities met in Bellagio, Italy to discuss the idea of faculty-student exchange programs. Robinson was elected president of a steering committee to consolidate the findings of the discussion.

As president of the National Association for Equal Opportunity in Higher Education (NAFEO), an independent association comprising the 111 historically black colleges and universities, and president of the African-American Steering Committee, Robinson feels confident about the outcome of his trip. He said, "we will make sure the linkages developed between Afro-American universities and African universities are the best they can be; that visiting professors are matched with a host institution that can best meet their needs."

"It would be a tremendous experience for our own students," Robinson contends, "to live under the conditions that most African students live under, with little or no luxuries. I think they would appreciate their own American universities more and the free enterprise system in general."

"Plus, I think that going back to the origin of their culture has great psychic value for Afro-American students. The days of rhetoric are over, year, he said following his return from a three-

transportation and jobs. "Surely, administrative and judicial review of their request for admission to this country is necessary, but to keep them behind locked doors during this process is a violation of everything America has stood for throughout its entire history."

recreational activities, which could total about \$125. Air fares are not included in the cost estimates.

Those wishing to attend "Chicago '81" should submit their registration forms now, a spokesman said. This is to help ensure that registrants will be able to stay in the main hotel. By having their letters postmarked on or before December 10, those registering will be able to avoid a late fee of \$10.

nice people

Where are all the nice people in the world?

It's a good question, because these days the networks seem to spotlight only the gloom, the doom or the kinkiness in the world.

But when you tune into Cablevision's exclusive superstation WTBS you'll actually see a show devoted to "Nice People" every Sunday night when the whole family can watch together. You'll see the two New York City policemen teaching boxing to ghetto kids in a gym they've equipped out of their own pockets. Share the inspiration of a Florida music teacher who has helped hundreds escape depression through her therapeutic hobby. And much more.

Nice people are alive and well on Cablevision's exclusive superstation WTBS.

It's television worth watching.™

PRESENTING HYATT AWARD

Mrs. Whitmore Awarded George Hyatt Scholarship

Mrs. Mary J. Whitmore, home economics extension agent and area Expanded Food and Nutrition Education Program (EFNEP) agent, Durham County, has been awarded a George Hyatt, Jr. Scholarship for 1981.

The scholarship award, named for retired Extension Director George Hyatt, Jr., is used to help deserving extension agents further their professional studies.

Mrs. Whitmore received a \$500 award she will use to attend and participate in a workshop for emerging home economics administrators at the University of Tennessee in Knoxville.

She also will study the current research, management, operation

and educational programs in home economics extension at Tennessee with specific reference to the EFNEP program.

Presentation of the scholarship was made at an awards banquet during a conference of extension workers at the Jane S. McKimmon Center. Dr. T.C. Blalock, extension director, presented the award.

HOW TO IMPROVE FURNACE EFFICIENCY

Although a reputable furnace professional can check and make any major repairs to your home's heating system, there are many maintenance procedures that you can follow to keep the furnace running smoothly and efficiently during the winter months ahead.

If your furnace hasn't already had its annual start-up inspection, now's the time to call in a pro for this job, advises the Better Business Bureau. Also at this time be aware of gyp artists posing as furnace repair persons from utility companies, fire departments, and local government. These "inspectors" would have you sign a contract for extensive repairs or even a complete new heating plant based on their "inspection."

The BBB warns that these "fly-by-afternooners" frequently knock at your door late in the day and announce that their "crew" has just completed a job on a neighbor's furnace or ducting system. They are "willing" to inspect your heating system, with no obligation, of course, while they are in the area. If you permit, they will probably dismantle the heating system and get you to sign a contract for repairs or replacement while you sadly observe the component parts spread across the basement floor.

Never let anyone have access to your furnace or heating system until you are satisfied that the firm is reputable, advises the Better Business Bureau. You can check with the BBB for information on any unknown firms or firms you may have doubts about. Remember: reliable firms do not use scare tactics, and they seldom make door-to-door solicitation for business.

Maintenance You Do

A typical heating plant has an oil, gas, or electric burner that produces heat that heats air or water. The air is forced through metal ducting to registers throughout your home. If water, the hot water is piped to the different rooms. Most forced air furnaces have filters. The filters are usually positioned between the cold air return and the blower at the front or the side of the furnace housing. Look for a metal panel marked "filter." The panel usually is held by screws or spring catches that you remove with a screwdriver to gain access to the filter.

Some filters, often found on heat pump systems, are exposed and may be simply pulled up and out and replaced. All filters are marked with the size and air flow direction along one edge. Make sure the replacement filter matches the old filter in size; place the filter so the arrows point in the same direction as the air flow from the cold air return. This probably will be marked on the framework of the filter holder or furnace.

The filters should be changed at the start of every heating season and at least every six weeks during the season. Don't attempt to clean the filters unless they are specifically designed to be cleaned and re-used. The filter material has special dust-attracting chemicals on it. New filters are so inexpensive that cleaning them is not a bargain.

Check the furnace motors. They should be wiped clean of dirt and grease. If the motors have little oil ports, squirt in drops of motor oil according to the type and frequency specified by the manufacturer.

If the furnace has a blower, the bearings at each end of the blower cage shaft may have oil ports. If so, lubricate the bearings during the heating season also according to the manufacturer's instructions. Dirty blowers often can be cleaned with the hose attachment of your vacuum cleaner.

Registers and Ducts

All heat and cold air registers and hot water radiators should be kept clean and free from obstructions for best efficiency. The easiest cleaning method is with a hose attachment on a vacuum cleaner. Remove any drapery material, rugs, carpeting, furniture pieces, etc., that could block the heat flow from the register or radiator.

If the heating system is ducted, run your hand along the ducts at the joints at the time the blower is running. When you feel any air leakage, wrap the duct joint with wide duct tape made especially for this purpose. Also insulate ducts and pipes that go through unheated crawl spaces and basement rooms.

Hot water systems sometimes need to be insulated. You can do this at the boiler, hot water storage tank, and hot water pipes that go through unheated spaces. Make sure you use the proper insulation. Special insulation jackets are available for tanks and "tape" or "wrap" is made for pipes.
