son, Cleophas, William Harvey;  
Willoughby, John T.

## IN MEMORIAM

On Saturday afternoon June 9th, 1917, the death Angel visited the home of Mr. and Mrs. Paul Brett and took the oldest daughter, Madeline, aged 15 years.

In May she was taken with rheumatism from which she never recovered, and on Tuesday night, June the 5th it effected her heart and from then on till Saturday she grew worse, when her Heavenly Father said, "It is enough; come up higher," and the passing away was as serene and beautiful as the sun-set of a summer day.

At times her sufferings were almost unbearable but she never murmured; and spoke frequently of dying, that the time with her loved ones was short, but she did not mind it at all, and for them not to grieve over her, that they had done all for her they could, and her home life was all she could ask it to be, but she was going to a far more beautiful home above the skies to be with her own dear mother who preceded her to the Glory land several years ago, and asked them not to grieve after her, therefore why should they grieve but look up through their tears and thank God for every heartache that brings them nearer to His side, and after such suffering they should gladly welcome Madeline's spirit back to the God who gave it, for around the great white throne she is singing praises forevermore. When we realize that their going is precious to our Lord, then we know why it is that heaven is so fast filling up with the choice ones of earth, still it is so hard for us to understand why one so young should be taken from our midst, still we know she is waiting for us in Heaven and sometime we'll understand. And while her death is a great shock to parents, brothers and sisters, as well as loved ones, they must put their trust in God, and remember that she is now wearing the promised crown of life in the hosts of the redeemed.

Lingering at death's gate for several days she never lost interest in persons, nor things around her, indeed she was the very soul of appreciation, making every one feel doubly paid for every kindness shown her. The vacancy in the home can not be filled, she can not come to us, but may we live such lives that we may meet in that great beyond where there are no farewells ever uttered.

She will be greatly missed by her devoted father, and her loving step-mother, who stood so faithfully by her and administered to every wish during her long hours of suffering, also by her brothers and sisters, but nowhere will she be missed more than in the Sunday School. She loved the Sunday School, its officers, teachers and members, and always radiated sunshine and good cheer as she came in and went out amongst us. We are deeply sensible of the great loss our school has sustained in the passing away of this dear girl and desire to record our appreciation of the years of constant service she so gladly and unselfishly rendered and express the profound sorrow felt by all that we shall see her no more as we gather from Sunday to Sunday to engage in the work she always loved so much.

## \$100 Reward \$100

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages and that is catarrh. Catarrh being greatly influenced by constitutional conditions requires constitutional treatment. Hall's Catarrh Medicine is taken internally and acts through the blood on the mucous surfaces of the system thereby destroying the foundation of the disease, giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in the curative powers of Hall's Catarrh Medicine that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

**Foresight**  
People are learning that a little foresight often saves them a big expense. Here is an instance: E. W. Archer, Caldwell, Ohio, writes: "I do not believe that our family has been without Chamberlain's Colic, Cholera and Diarrhoea remedy since we commenced keeping house years ago. When we go on an extended visit we take it with us." Obtainable everywhere. Adv.

## A DOUBLE WEDDING

Goldsboro, June 17.—A double wedding, beautiful in its simplicity, was solemnized Thursday morning, June 14, at 10:45, at the home of Mr. and Mrs. C. F. Branton, 310 S. John st., when their two attractive daughters were married, Miss Bessie Saunders to Mr. William Burden Gurley, of Windsor, N. C., and Miss Ethel Marguarette to Mr. Victor Kent Overman, of Weldon, N. C.

The brides entered the parlor, which was very tastefully decorated leaning on the arms of their father, who gave them away. They were joined here by the grooms, where Rev. A. D. Wilcox, the pastor of St. Paul's Methodist, performed the ceremony under an improvised altar of ferns.

After an extended northern tour including Washington, New York, Niagara Falls, and other points of interest, Mr. and Mrs. Gurley will make their home in Windsor, N. C., and Mr. and Mrs. Overman in Weldon, N. C., both of the grooms being druggists.

## MEETING OF COMMISSIONERS

Murfreesboro, June 1.—Meeting of the Board of Town Commissioners, present: I. Pipkin, Mayor; J. L. Lawrence, W. C. Ferguson, L. R. Parker, M. E. Worrell and J. R. Evans, Commissioners. Minutes of last meeting read and approved.

On motion the following order of business adopted: 1. Reading of minutes of last meeting. If errors made, corrections made; if none, to be approved. 2. Report from Treasurer, balance on hand at last meeting, amount paid over to Treasurer, balance on hand. 3. Report from Constable; collections made since last meeting, amount paid over to Treasurer, balance on hand. 4. Reports of committees and action or disposition of these reports. 5. Miscellaneous business. 6. Payment of accounts. 7. Adjournment.

## SHEEP FARMING TO BE ENCOURAGED

Seemingly a lagging industry in the State of North Carolina, the production of sheep is going to be pushed by the Animal Industry Division of the North Carolina Experiment Station. For many years, Mr. R. S. Curtis has been interested in and has urged the production of sheep in the State but has seen the industry gradually decline on account of lack of proper attention, the gradual encroachment of cultivated fields and the growing menace of dogs; now, however, an appropriation has been given this work by the State Department of Agriculture and the United States Department of Agriculture and Mr. George Evans former Superintendent of the Animal Industry farm at West Raleigh has been selected to carry on the work.

Mr. Evans is a native of England, coming from the center of the sheep producing section of that Country. He has worked with sheep all of his life, coming to this country, over ten years ago with a large importation of sheep for Mr. Henry Wardell of New York State. After remaining with Mr. Wardell for three years, he took up work in Virginia and showed sheep at the North Carolina State fair in 1911 where his ability in handling them was discovered by the officials in charge of the Animal Industry division. The following Spring, he was employed by this division to take charge of the livestock feeding work and was then later promoted to entire charge of the Animal Industry Farm. Now he takes the recently created position of field man in sheep work. This promotion comes in recognition of his ability in handling all phases of livestock work and more especially of sheep.

All kinds of sheep work will be conducted. The farmers of the State will be reached through the County Agents of the Agricultural Extension Service. Experimental work will be done as heretofore on three of the Branch Stations and in addition an exhaustive study will be made in the mountains on a 1350 acre farm which has an ideal location for a sheep experimental work.

## Peach Growing in This State

The growing interest in peach production in North Carolina and the resulting demands on the staff of the Agricultural Experiment Station for information in regard to this matter has caused the Department of Agriculture to issue "Peach Growing in North Carolina," bulletin number 227. This bulletin gives some valuable facts in regard to the production, fertilization, cultivation, pruning, and spraying of peaches. It also points the main facts in regard to successful peach production as found by the large commercial orchards in the State.

The bulletin is extremely timely just now when a maximum crop seems to be set on the trees. It is important that this crop be kept without rotting or spoiling by the attacks of insect enemies or fungus diseases so that it may be canned or dried for further use as food. The bulletin may be obtained on request by any citizen of the State and further facts in regard to the peach industry may be had on application to the Division of Horticulture, Department of Agriculture, Raleigh.

ON motion Secretary is instructed to buy new record book for town. On motion ordinance no. 1 is hereby amended by striking out the word "morning" in line 4 and inserting in its place the word evening. On motion W. S. Trader is elected Constable, his bond to be fixed at \$1000. Same can be executed at any time before the next meeting of the Board. On motion the Mayor is appointed a committee to receive bond of constable.  
On motion the Board adjourned.  
E. N. Evans, Secretary.

## LEGUMES LEAVE LITTLE NITROGEN IF CUT

West Raleigh, N. C., June 19.—It is a general opinion among a number of people that when cowpeas and soybeans are grown for hay, the stubble and roots of these crops enrich the land in nitrogen. This is an erroneous supposition, says Prof. M. E. Sherwin; especially if the crops are grown on rich land or on land to which nitrogen has been applied, as, under such conditions, nearly the whole of the nitrogen is taken from the soil and but little from the air.

Furthermore, if the plants are not in some way inoculated with the nitrogen-gathering bacteria, no nitrogen will be taken from the soil, but it all must come from the soil. Tests made in Illinois with cowpeas on land in which nitrogen was the limiting factor, showing that 73 per cent of the nitrogen was taken from the air; the remaining 27 per cent was taken from the soil. Soybeans grown in Wisconsin on rich soil secured only 14 per cent of their nitrogen from the air, the remaining 86 per cent from the soil.

Statistics from the Delaware Experiment Station show that the roots of cowpeas contain only 6 per cent of the total nitrogen of the plant and soybeans 6.5 per cent. The Wisconsin and Michigan stations show that the roots of soybeans contain 4 per cent of the total nitrogen. Hopkins says, as a rule, the roots and stubble of these crops contain less than 10 per cent of the total nitrogen. Thus 90 per cent or more is removed in the hay, and for the soil to be enriched in nitrogen more than 90 per cent of this element must be taken from the air.

None of the above mentioned tests show that this portion of nitrogen has been secured from the air, even under the most favorable conditions. On the contrary, more of this element has been removed from the soil than the total contained by the roots and stubble. This leads to the conclusion that growing these crops for hay does not enrich the land in nitrogen.

Other legume crops, which occupy the land longer and develop larger root systems, leave a greater proportion of their nitrogen in the roots and may enrich the soil in nitrogen up to a certain point, even though the hay crop is removed.

**Stomach Troubles and Constipation.**  
"I will cheerfully say that Chamberlain's Tablets are the most satisfactory remedy for stomach troubles and constipation that I have sold in thirty-four years drug store service," writes S. H. Murphy, druggist, Wellsburg, N. Y. Obtainable everywhere. Adv.

whenever You Need a General Tonic Take "Grove's"  
The Old Standard Grove's Tasteless  
chill Tonic is equally valuable as  
General Tonic because it contains the  
well known tonic properties of QUININE  
and IRON. It acts on the Liver, Drives  
out Malaria, Enriches the Blood and  
Builds up the Whole System. 50 cents.
