Phosphoric Acid, Nitrogen (commonly called Ammonia) and Potash are three necessary elements required for every crop. Of these three elements, AMMONIA IS THE MOST IMPORTANT AND THE MOST DIFFICULT TO SECURE IN A FULLY AVAILABLE FORM.

Ammonia is derived from Animal, Vegetable or Mineral sources, but Agricultural Colleges and farmers agree that ANIMAL AMMONIATES DERIVED FROM FISH MAKE THE BEST PLANT FOOD KNOWN.

The Fisheries Products Company are the largest producers of Fish Scrap Ammoniates in the world and manufacture a pure Fish Fertilizer in connection with other Fish Products.

Fish scrap is actually worth more than double the market value of other Organic or Mineral Ammoniates. On this basis, the various brands of our famous FISCO Fertilizers are actually worth from \$5.00 to \$15.00 per ton more than other makes of fertilizers having the same analysis. This is the reason thousands of Southern farmers are able to testify THEY USE ONE-THIRD LESS OF THE FAMOUS FISCO FERTILIZERS and at the same time INCREASE THEIR CROP YIELD FROM 50 TO 100 PER CENT.
