When Winchester arrived Phiel, Runndhend, with his warriors, render-Ruisin with same 300 men, he found Lewis with 600, posted in gardens, yards, and the enclosures within them, well prepared for any emergency. On Lewis's right was an open field bounded by another enclusure like those in which he had posted his men. With General Winchester came Colonel Wells, who being of the regular army, outranked Colonel Lowis of the volunteers .-Lewis' advice to Winchester was to post the 300 men with Wells in the enclosure on Lewis' left. To this Wells objected, requiring the right of Lewis, which General Winchester allowed him to take, in an open exosed field, instead of being under cover of may be attributed much of the misfortune of

Select Good Seed.

There is no way in which improvement in priculture can be made in se cheap a way as the judicious selection of seed. A supe rior kind of seed ean often be obtained for an acre of land at a small expense-perhaps at the extra cost of only 50 cents—and it may be the monning of adding 10 per cent to the crop, which may amount to several dollars

every one has it in his power to make im provements in this way by a good selection. If an earlier kind he desirable, then select seed from the earliest that tipens. If you would have larger products, then select seed from the largest. In this way almost every thing can be improved. Some cultivaturs will select their best beans, peas, and other vegetables for eating, and take what is left or seed. In this way he can depend on deterioration.

At a small expense, the finest seed, liest, largest, or latest, as desirable, may selected from the best plants, and a little so thus obtained can soon be multiplied into a large quantity. Grain selected from a few fine heads can soon be increased in a sufficient sheaves of wheat, rye, or other grain, over a box or easily, the largest and plumpest berries can be readily shoken out, which will be the best for seed. Then with a suitable soire the largest of this choice lot may be separated from the real, and by washing in water, salt water if necessary to effect your purpose, at the time of sawing, the heaviest grain may be obtained. All this can be done at a trifling expense, and the advantages from the improvement will continue for years.-

Wheat from Wisconsin Farms -The Ra cine, Wiscomin, Advertiser says that two farmers from Jamesville, Rock county, whose farms adjoin, last fall coupointly had 200 acres of prairie broken and sown in wheat—the work being performed by two young men, with ten yokes of oyen, and two hops to drive a few weeks. These 200 acres of wheat have recently been cut by menns of a michine, occupying only twelve and a half days, with an extra expense of fifty conts an acre-for binding and stacking. 'The wheat turned out an aggregate of 5000 bushels, worth \$2,500 or an average of 25 bushels to the ocre. On Friday, the owner came to Racine with two wagons, loaded with an aggre-gate of 205 bushels of wheat, which he sold at 62 1 2 cents the bashel.
