THE SEVEN STARS .- An interesting test of visual power may be tound in the Pleiades, commonly called "the seven stars." Ordinarily only six stars are visible to the naked eye, although the telescope shows a large number of smaller ones in the group. But nearly thirty years before the discovery of the telescope, Moestlin mapped eleven stare, and may have observed fourteen, while Prof. W. F. Denning, the well known English astronomer, claims that he can usually discern thirteen of the stars with the naked eye, and on one occasion was able to see the fourteenth.

Kindness to Animals

-Harper's Young People

Every one should know that kindly reated animals will do their best for their owners. A curious case happened recently, which may be given as an example. A noted trotter was driven in a race by a strange driver. The horse was evidently dissatisfied and lost two heats. The old driver knew the horse could do better, and begged the owner to be permitted to drive him. His entreaties prevailed, and when he mounted the sulky the horse whinned with pleasure and won the next three heats with ease, making such a record that the owner had an offer of fifteen thousand dollars for the Mecklenburg county, and by authority thereof, I will sell, on the premises, on Monday the 4th day of October, 1886, a TRACT of LAND lying one which is not attached to the owner or in Pineville Township, adjoining the lands of James Cunningham, J. M. Davis and others, containing 35½ Acres, known as the "Hood Place." This is true of all farm animals, who return kindness with affecall animals with kindness.

If it were possible to rise above the atmosphere which surrounds the earth we should see nothing but an intense and sharply defined ball of fire, while everything else would be wrapped in total darkness. There could be no diffusion of light without an atmosphere or some similar medium for it to act upon; but if the air about us extended to a height of seven hundred miles, the rays of the sun could not penetrate it and we would be left in darkness. At the depth of 700 feet in the ocean the light ceases altogether, one-half of the light being absorbed in passing through only seven feet of the
